

Bureau of Justice Statistics Bulletin

Public Juvenile Facilities, 1985

Children in Custody

A total of 1,040 publicly operated State and local juvenile detention, correctional, and shelter facilities held 49,322 juvenile residents on February 1, 1985, an increase of 1% from the same date in 1983. About 93% of the juveniles in custody were accused of, or had been adjudicated delinquent for, acts that could be criminal offenses if committed by adults. Most of the rest were "status offenders," such as truants, runaways, or curfew violators.

These findings are from the 1985 Census of Public Juvenile Detention, Correctional, and Shelter Facilities. This census collected information on 1-day counts of juveniles for February 1, 1985, and annual data for the calendar year 1984. A separate census of privately run facilities was also conducted in 1985. Its findings will be reported separately. Preliminary findings indicate that approximately 2,000 private facilities housed about 34,000 juveniles.

Other findings of the 1985 census of public juvenile confinement facilities include:

- The juvenile population was predominantly male (86%) and white (61%). Blacks accounted for 37% of the juveniles; other races, 2%.
- There were 185 juveniles confined in public juvenile facilities per 100,000 juveniles at least 10 years old in the general population, up 5% from 1983.
- The West had the highest confinement rate (327 per 100,000), followed by the Midwest (166), the South (162), and the Northeast (99). The West was also the only region to experience an increase between 1983 and 1985 in the number

Begun in 1971, the Children in Custody series is designed to provide biennial information on both public and private residential facilities holding juveniles in custody across the country and on the juveniles they hold. It was designed by the predecessor agency of the Bureau of Justice Statistics (the Statistics Division of the National Criminal Justice Information and Statistics Service, Law Enforcement Assistance Administration). The series replaced the annual survey on adjudicated delinquents conducted by the Department of Health, Education, and Welfare, which was published in a series called Statistics on Public Institutions for Delinquent Children.

In 1977 the Office of Juvenile Justice and Delinquency Prevention (OJJDP) began sponsoring the Children in Custody series. In 1985 the

October 1986

Bureau of Justice Statistics (BJS) assumed responsibility for data analysis and report preparation as part of an interagency agreement with OJJDP. This publication is the first bulletin produced through the cooperative efforts of OJJDP and BJS. Data for the series are collected by the U.S. Bureau of the Census.

The Bureau of Justice Statistics gratefully acknowledges the contributions of the many administrators of public juvenile facilities nationwide to this data collection effort. Their cooperation and patience produced a questionnaire response rate of virtually 100%. It is hoped that this and subsequent publications will be useful to policymakers and practitioners in dealing with juvenile justice issues.

Steven R. Schlesinger
Director

of juveniles in custody in public juvenile facilities (up 9%).

- During calendar year 1984, public juvenile facilities had just over half a million juvenile admissions (521,607) and discharges (515,301).
- On February 1, 1985, about 18% of public juvenile facilities had more residents than they were designed to hold, down from 21% in 1983. These 18% held 45% of all juveniles in public facilities, about the same proportion as in 1983.
- Most of the public juvenile facilities (56%) were locally operated; however,

most of the juveniles (63%) were held in State-run facilities.

- Throughout the Nation, the average cost of housing one resident for a year in a public juvenile facility was \$25,200. This figure was highest in the Northeast (\$39,900), followed by the Midwest (\$26,100), the West (\$22,900), and the South (\$22,700).
- Juveniles detained pending adjudication, disposition, or placement stayed an average of 12 days in custody; those committed by court authorities stayed an average of 163 days (just over 5 months); those who were voluntarily admitted stayed an average of 32 days.

Table 1. Average daily population and 1-day count of residents in public facilities, 1983 and 1985

	Number of residents	
	1983	1985
One-day count		
Juveniles ^a	48,701	49,322
Adults ^b	2,098	2,080
Total	50,799	51,402
Average daily population		
Juveniles ^a	48,245	47,496
Males	41,641	40,984
Females	6,604	6,512
Adults ^b	1,963	1,984
Total	50,208	49,480

Note: One-day counts are for February 1 of each year. Average daily population data are for the calendar years 1982 and 1984.

^aJuveniles are persons of an age (usually under 18) specified by State statute, subject to juvenile court authority at the time of admission, regardless of age at the time of the census.

^bAdults are persons not of juvenile age who are subject to the original jurisdiction of criminal court rather than juvenile court. Most of these adults are "youthful offenders" in the few States with youthful offender statutes.

Population

On February 1, 1985, public juvenile facilities nationwide housed 49,322 juveniles, 1% more than in 1983 (table 1). Throughout this report juveniles are those specified by State statute as subject to the authority of juvenile court (usually those under 18 years old), regardless of age at the time of the census.

In addition to juveniles, public juvenile facilities in 1985 held 2,080 young adults, roughly the same number as in 1983. The overwhelming majority of these young adults held in public juvenile facilities (95%) were in California, where young adult offenders may be committed to California Youth Authority (CYA) facilities with juveniles. On February 1, 1985, only six States held adults in public juvenile facilities:

State	Number of adults
California	1,984
Indiana	52
Minnesota	26
New York	14
Tennessee	3
Iowa	1

The average daily population of juveniles in publicly operated juvenile facilities during calendar year 1984 was 47,496, somewhat less than the 1-day count of February 1, 1985. Unlike the 1-day count, which increased slightly between the 1983 and 1985 censuses, the average daily population of juveniles decreased about 2% between 1982 and 1984.

Note: Data are for February 1 of each year.

^aJuveniles in the population are persons 10 years old through the statutorily defined maximum age subject to juvenile court authority in

each State.

^bVermont did not operate any public juvenile facilities.

The West was the only region in which the number of juveniles in custody in public juvenile facilities increased between 1983 and 1985, up 9% (table 2). The greatest decline was in the Northeast (down 6%), followed by the South (down 3%) and the Midwest (down 1%). California had the largest juvenile population in public facilities in 1985 (12,524), followed by Ohio

(3,058), Texas (2,209), and Florida (2,179).

The number of juveniles in custody on February 1, 1985, represented 185 per 100,000 juvenile residents of the United States at least 10 years old, 5% higher than the 1983 rate of 176 per 100,000. The District of Columbia, the only wholly urban jurisdiction, had the

highest rate of confinement to public juvenile facilities (461), followed by California (430), Nevada (425), and Alaska (314).

Population movement

During 1984 there were more than one million admissions to or discharges from public juvenile facilities, about the same number as in 1982 (table 3). The number of juvenile admissions (521,607) was slightly higher than the number of juvenile discharges (515,301). Thus, 1984 juvenile admissions were 11 times greater than the average daily population. Admissions include new entries, reentries, and transfer entries. Discharges include final exits, transfer exits, exits to supervision, and unauthorized exits.

Females accounted for about 20% of all admissions and discharges. In addition, 11,754 adults were admitted to or discharged from juvenile facilities (about 1% of total transactions). These figures are similar to those for calendar year 1982.

The Northeast region admitted and discharged the fewest juveniles—just over 82,000—and the West the most—more than 400,000 (table 4). More than half of the admissions and discharges in the West occurred in California, which had the largest volume of any State.

Demographic characteristics

Males constituted 86% of the juvenile custody population in 1985 (table 5). The male population was 1% larger than in 1983; the female population, 4% larger.

Whites were 61% of the juvenile population; blacks, 37%; and other races, 2%. Hispanics accounted for 13% of the juvenile population.

About 82% of the juveniles in cus-

parents, the court, or a social agency) without adjudication.

On February 1, 1985, 70% of the juveniles in custody had been committed; 29% were detained; and 1% were voluntarily admitted. For admissions and discharges during 1984 the proportions were reversed: the vast majority (80%) were accounted for by detained juveniles, compared to 19% for committed juveniles.

Reasons held in custody

There are three reasons juveniles are detained in or committed to public juvenile facilities: (1) they have been accused of, or adjudicated delinquent for, acts that would be crimes if committed by an adult; (2) they have been accused of, or found to have committed, "status offenses" such as running away, truancy, curfew violations, possession of alcoholic beverages, or incorrigibility—acts that are not criminal offenses if committed by adults; or (3) they have been placed in the care or custody of the State because of dependency, neglect, abuse, or other reasons.

The overwhelming majority (93%) of juveniles in public custody on February 1, 1985, were being detained pending adjudication for a criminal offense or had been committed after a finding of delinquency for a criminal

offense (table 6). Most of the rest were status offenders.

Nearly a fifth of the juveniles held for delinquent behavior were detained or committed for the specific crimes of murder, forcible rape, robbery, or aggravated assault. Almost half (48%) the juveniles held for delinquent behavior were detained or committed for property offenses, and most of these for the crimes of burglary, arson, larceny-theft, or motor vehicle theft.

Other delinquent acts for which juveniles were either detained or adjudicated included alcohol and drug offenses (6%), public order offenses (4%), and probation violations (10%).

A higher percentage of male than female juveniles in public facilities were held for reasons of delinquent behavior (96% vs. 76%). Even though females comprised only 14% of all juveniles in custody in public juvenile facilities in 1985, they were 52% of all those held for status offenses.

Facility characteristics

The 1,040 public juvenile facilities in operation on February 1, 1985, varied by purpose for confining juveniles—long-term vs. short-term—and by the type of environment—institutional vs. open (table 7). (For an explanation of facility classifications see "Methodology.") Long-term facilities held two-thirds of the juveniles in custody, primarily those who had been adjudicated and committed or placed for treatment. Short-term facilities housed mainly juveniles awaiting adjudication, commitment, or placement.

More than half (54%) of the public facilities in 1985 were long-term facilities. About 96% of the juveniles in long-term facilities were committed, while 86% of the juveniles in short-term facilities were detained.

Both short-term and long-term facilities may have either institutional or open environments. Institutional environments generally allow limited access to the community and place greater restraints on the movement of residents within the facility. Open environments provide relatively frequent access to the community and have minimal restraints on the movement of residents within the facility.

Facilities with institutional environments constituted 65% of all facilities and housed 82% of the juvenile population. While short-term facilities were overwhelmingly institutional in nature (89%), a majority of

Total	8,569	8,905	9,646	9,740	14,484	13,549	18,074	19,177	50,773	51,371

Note: Data are for February 1 of each year, but exclude 10 facilities that did not report design capacity in 1983 and 15 that did not

report design capacity in 1985. Design capacity is the number of residents a facility is constructed to hold without double bunking in

single rooms and without using areas not designed as sleeping quarters to house residents.

long-term facilities with institutional environments.

The number of public juvenile facilities increased by 2% between 1983 and 1985 (table 8). In 1985, nearly two-thirds of the long-term facilities were State-operated, while more than four-fifths of the short-term facilities were run by city or county authorities. Most juveniles in public facilities (63%) were held in facilities operated by State authorities.

Among juveniles in State facilities, 72% were held in long-term institutional settings, up 3% from 2 years earlier. Among juveniles in locally operated facilities, 64% were housed in short-term institutional settings, up 9% from 1983.

Design capacity and occupancy rates

In 18% of the public juvenile facilities in 1985 resident populations exceeded design capacity (table 9). The comparable figure in 1983 was 21%. Facilities operating above design capacity housed 45% of all residents in 1985, about the same as in 1983.

Generally, the larger the design capacity of the facility, the more likely it was to house more residents than it was constructed to hold. In 1985 facilities with a design capacity of 100 or more residents that were operating above capacity accounted for 6% of all facilities but housed 36% of all residents.

Operating costs

Nationwide operating costs for public juvenile facilities totaled more than \$1.2 billion for 1984. The per-capita cost for 1 year of housing in a public juvenile facility was \$25,200, ranging from about \$22,700 in the South and

Table 10. Public juvenile facilities and per-resident operating costs by region and State, 1984-85

	Number of facilities	Average cost to house one resident for 1 year*		Number of facilities	Average cost to house one resident for 1 year

			Utah	15	32,000
			Washington	30	29,300
			Wyoming	2	22,400

Note: Facility count data are for February 1, 1985. Cost data are for the year 1984. Average cost to house one resident for 1 year was calculated by dividing each State's total

operating costs for the year by its average daily resident population for the year. *Vermont did not operate any public juvenile facilities.

\$22,900 in the West to \$26,100 in the Midwest and \$39,900 in the Northeast (table 10). Per-capita costs varied substantially among States, ranging from \$15,200 in Florida to \$66,100 in Connecticut.

The overall average cost to house one resident for 1 day in 1984 was \$69 and the average cost per placement, about \$2,800 (table 11). The cost to house one resident 1 day varied by

facility type and environment. The cost in short-term facilities (\$76) was more than in long-term facilities (\$66), and the cost in institutional facilities (\$72) was more than in open facilities (\$56). The cost per placement, however, based on the average length of stay, was substantially higher for long-term facilities (\$11,433) than for short-term facilities (\$1,009), and was higher for open facilities (\$6,028) than for institutional facilities (\$2,557).

Length of stay

Juveniles discharged from public facilities during 1984 who had been detained pending adjudication, disposition, or placement had an average stay of 12 days in custody (table 12). On the other hand, those who had been committed to custody by court authorities stayed an average of 163 days (just over 5 months). Finally, those who had entered custody voluntarily stayed an average of 32 days. (For an explanation of how average length of stay was calculated, see "Methodology".)

Committed juveniles discharged from long-term facilities with institutional environments had the longest average length of stay, almost 8 months. Voluntarily admitted juveniles discharged from short-term institutional facilities had the shortest average stay, 9 days.

Methodology

The 1985 census collected information on 1-day counts of juveniles and facilities as of February 1, 1985, and annual data for the calendar year 1984. Similarly, the 1983 census collected information for February 1, 1983, and for calendar year 1982.

Data were obtained through mailed questionnaires. A followup mailing and phone calls were used to encourage reporting. The response rate in 1985 was 99.9%.

Residential programs and group homes in operation on February 1, 1985, were included in the census if they housed more than three residents; if at least 50% of the residents were juveniles; and if accused or adjudicated delinquents and status offenders were at least 1% of their average daily population. In California, however, all California Youth Authority facilities were included in the census. Juvenile facilities operated as part of adult jails were excluded, as were nonresidential facilities, facilities exclusively for drug or alcohol abusers or nonoffenders, and Federal juvenile correctional facilities.

Each facility was classified as either short-term or long-term based on the purpose for which most juveniles were held. Short-term facilities typically hold juveniles awaiting adjudication or other disposition. Long-term facilities generally hold juveniles who have been adjudicated and committed to custody.

The environment of each facility was also categorized as institutional or

Table 11. Average per-day and per-placement operating costs in public juvenile facilities, 1984

	All facilities	Short-term facilities	Long-term facilities
Average cost to house one resident for 1 day^a			
All environments	\$69	\$76	\$66
Institutional	72	76	69
Open	56	81	54
Average cost per placement^b			
All environments	\$2,799	\$1,009	\$11,433
Institutional	2,557	999	12,969
Open	6,028	1,420	7,737

^aPer-day operating costs were calculated by dividing annual operating costs by the average daily resident population and then dividing by 366.

^bPer-placement operating costs were calculated by multiplying the per-day costs by the average length of stay in days for each facility, then averaging over facilities in each category.

Table 12. Average lengths of stay for juveniles discharged from public facilities by adjudication status, 1984

	Average length of stay in:		
	All facilities	Short-term facilities	Long-term facilities
Total			
All environments	41 days	13 days	174 days
Institutional	36	13	187
Open	108	18	142
Detained			
All environments	12	12	21
Institutional	12	12	20
Open	19	17	24
Committed			
All environments	163	30	216
Institutional	162	30	238
Open	164	14	166
Voluntarily admitted			
All environments	32	18	34
Institutional	27	9	32
Open	34	30	34

open based on security arrangements and the degree of access residents had to community resources. Institutional environments impose greater restraints on residents' movements and limit access to the community. Most detention or diagnostic centers, training schools, and ranches were classified as having institutional environments. Open environments allow greater movement of residents within the facilities and more access to the community. Facilities with open environments included mainly shelters, halfway houses, group homes, and a few ranches.

Estimated average length of stay data were calculated for each adjudication status (detained, committed, and voluntarily admitted) for each facility type (institutional, short- or long-term, and open, short- or long-term). In contrast with previous years, average length of stay data were weighted by the number of juveniles discharged in each adjudication status. Thus, comparisons with earlier figures are inappropriate.

New releases from BJS:

- Children in custody: 1982/83 census of juvenile detention and correctional facilities, 11 pp., NCJ-101686, 9/86.
- Prosecution of felony arrests, 1981, 129 pp., NCJ-101380, 9/86.

Bureau of Justice Statistics Bulletins are prepared principally by BJS staff. This bulletin was written by Melissa Sickmund, former BJS statistician, and Phyllis Jo Baunach, chief, censuses and surveys. Carol B. Kalish, chief of data analysis, edited the bulletin, assisted by Marianne W. Zawitz. Barbara Allen-Hagen, social science program analyst of the Office of Juvenile Justice and Delinquency Prevention, provided useful reviews of each draft. Marilyn Marbrook, publications unit chief, administered report production, assisted by Betty Sherman, Millie Baldea, Joyce M. Stanford, Tina Dorsey, and Priscilla Middleton. Statistical assistance was provided by Christopher A. Innes, Susan Kline, and Sophie Bowen. Data collection and processing were conducted by Arthur Ciampa and Regina Yates of the U.S. Bureau of the Census.
