Bureau of Justice Statistics reports

(Revised July 1994)

Call toll-free 800-732-3277 to order BJS reports. To be added to one of the BJS mailing lists, or to speak to a reference specialist in statistics at the Bureau of Justice Statistics Clearinghouse, P.O. Box 179, Annapolis Junction, MD 20701-0179; or fax orders to 410-792-4358. For drugs and crime data, call the Drugs & Crime Data Center & Clearinghouse, 1600 Research Blvd., Rockville, MD 20850, toll-free 800-666-3332.

BJS maintains these mailing lists:

- Law enforcement reports
- Federal statistics
- Drugs and crime data
- Justice expenditure and employment
- Privacy and security of criminal histories and criminal justice information policy
- BJS bulletins and special reports
- State felony courts
- Corrections
- National Crime Victimization Survey
- Sourcebook of Criminal Justice Statistics (annual)

Single copies of reports are free; use title, NCJ number to order. Postage and handling are charged for bulk orders of single reports. For single copies of multiple titles, up to 10 titles are free; 11-40 titles \$10; more than 40, \$20; libraries call for special rates.

Public-use tapes, disks, and CD-ROM's of BJS data sets and other criminal justice data are available from the National Archive of Criminal Justice Data (formerly CJAIS), P.O. Box 1248, Ann Arbor, MI 48106 (toll-free 800-999-0960).

National Crime Victimization Survey

Criminal victimization in the U.S.:

- 1973-92 trends, NCJ-147006, 7.94
- 1992 (final), NCJ-145125, 4.94
- Violent crime: Selected findings, NCJ-147486, 4.94
- Elderly crime victims: Selected findings, NCJ-147186, 3.94
- Violence against women, NCJ-145325, 1.94
- Highlights from 20 years of surveying crime victims: 1973-92, NCJ-144525, 10.93
- Crime and older Americans information package, NCJ-140091, 4.93, \$15
- Crime victimization in city, suburban, and rural areas, NCJ-135943, 6.92
- School crime, NCJ-131645, 9.91
- Teenage victims, NCJ-128120, 5.91
- The Nation's two crime measures: Uniform Crime Reports and the National Crime Survey, NCJ-122705, 4.90
- Redesign of the National Crime Surveys, NCJ-111457, 3.89
- The seasonality of crime victimization, NCJ-111033, 6.88
- Victimization and fear of crime: World perspectives, NCJ-93872, 1.85, \$9.15
- The National Crime Survey: Working papers, Vol. I, History, NCJ-75374, 8.62
- Vol. II, Methodology, NCJ-90307, 1.85, \$9.90

BJS crime data briefs

- Child rape victims, 1992, NCJ-147051, 6.94
- Crime and neighborhoods, NCJ-147005, 5.94
- Guns and crime: Handgun victimization, firearm self-defense, and firearm theft, NCJ-147003, 4.94
- Carjacking, NCJ-147002, 3.94
- Costs of crime to victims, NCJ-145695, 2.94

BJS bulletins

- Criminal victimization 1992, NCJ-144726, 11.93
- Crime and the Nation's households, 1992, NCJ-143288, 9.93
- Measuring crime, NCJ-75710, 2.81

BJS special reports

- Black victims, NCJ-122562, 4.90
- Hispanic victims, NCJ-120537, 1.90
- Motor vehicle theft, NCJ-105978, 3.88
- Violent crime trends, NCJ-107217, 11.87
- Robbery victims, NCJ-104639, 4.87
- Violent crime by strangers and non-strangers, NCJ-103702, 1.87
- Preventing domestic violence against women, NCJ-102037, 8.86

BJS technical reports

- New directions for NCS, NCJ-115571, 3.89
- Series crimes: Report of a field test, NCJ-104515, 4.87

Corrections

BJS bulletins and special reports

- Prisoners in 1993, NCJ-147036, 6.94
- Women in prison, NCJ-145321, 3.94
- Capital punishment 1992, NCJ-145031, 12.93
- HIV in U.S. prisons and jails, NCJ-143292, 9.93
- Drug enforcement and treatment in prisons, 1990, NCJ-134724, 7.92
- Violent State prisoners and their victims, NCJ-124133, 7.90
- Prison rule violators, NCJ-120344, 12.89
- Recidivism of prisoners released in 1983, NCJ-116261, 4.85
- Drug use and crime: State prison inmate survey, 1986, NCJ-111940, 7.88
- Time served in prison and on parole, 1984, NCJ-108844, 12.87
- Profile of State prison inmates, 1986, NCJ-109926, 1.88
- Imprisonment in four countries, NCJ-103967, 2.87

National Corrections Reporting Program:

- 1992, NCJ-145862, 7.94
- 1991, NCJ-145861, 2.94
- Prisoners at midyear 1993 (press release), NCJ-143560, 9.93
- Correctional populations in the U.S.: 1991, NCJ-142729, 8.93

Acknowledgments. This report was prepared by Lisa D. Bastian of the Bureau of Justice Statistics under the supervision of Patsy A. Klaus. Production, graphical, and statistical assistance was furnished by Tina Dorsey. Tom Hester edited this report.

National Crime Victimization Survey data collection and processing activities are conducted by the Bureau of the Census. The program is currently under the supervision of N. Gail Hoff, Chief, Crime Surveys Branch, Demographic Surveys Division, assisted by Marilyn Monahan, Patricia Bowles, Edwina Jaramillo, Christopher Laskey, Karen Monroe, and Sherrie Schrama. Programming assistance in the Demographic Surveys Division was under the supervision of Stephen Phillips, with assistance by Chris Alaura, Hugh O'Connor, Mildred Strange, and David Watt.

Guidance on technical matters related to this program was provided by David Hubble, Miriam Rosenthal, and Carol Persely, Statistical Methods Division, Bureau of the Census, under the supervision of Charles Alexander.

Special recognition goes to the Census Bureau field representatives who have persistently worked to obtain a response rate of 95% or more. We would also like to recognize the contributions of all employees of the Census Bureau field offices as well as at the Bureau headquarters.

In the Bureau of Justice Statistics the data collection program is monitored by Michael R. Rand.

Foreword

For 20 years the National Crime Survey (NCVS) has measured the number of rapes, robberies, assaults, and thefts that individuals and households have sustained. The survey has counted the crimes not reported to the police, as well as those reported. As a result, only the NCVS enables an interpretation of nationwide trends in unreported and reported crimes according to selected victim characteristics.

Since a peak in the early 1980's, the total of crime victimizations has declined. In 1981, NCVS provided an estimate of over 41.4 million victimizations; by 1992, that number had fallen to about 33.6 million. For certain population groups and for certain types of crimes, however, the trends have not been positive. The young, those who live in central cities, and black persons have particularly felt the brunt of increases in violent crime not experienced by the rest of the population. For example, in 1981 almost 68 per 1,000 persons between ages 16 and 19 were victims of rape, robbery, or assault, while in 1992 that rate had reached nearly 78 per 1,000.

This report provides sample survey data covering over three-quarters of a billion (748,121,000) criminal victimizations experienced by the public between 1973 and 1992. Such data are possible only because of the cooperation of the more than 4 million sampled interviewees.

Lawrence A. Greenfield
Acting Director

Preface

This report on trends in crime from 1973 through 1992 is based on data obtained by the National Crime Victimization Survey (NCVS). The Bureau of Justice Statistics sponsors the NCVS, a continuing survey of individuals from a representative sample of housing units across the United States. This report shows trends in victimization rates for selected major crimes based on demographic characteristics of the victims and trends in victimizations that were reported to the police. Since the survey began in 1972, the Bureau of the Census has conducted the interviews.

The NCVS focuses on certain personal and household crimes whether completed or attempted, that are of major concern to the general public and law enforcement authorities. The personal crimes consist of rape, robbery, assault and larceny, and the household crimes of burglary, larceny, and motor vehicle theft. The category of rape normally includes both male and female rape cases, but in this report only the female rape cases were considered for analysis. Table 6 provides rates for both sexes.

Significant findings are presented in the first part of this report, along with a series of charts which depict significant trends by major crime categories. The data tables in Appendix I provide the basis for the descriptive analysis. Appendix II contains information on the sample design, sources of non-sampling error, and the estimation procedure, as well as a discussion of the computation of standard errors.

All of the numbers in this report are estimates and are subject to sampling error because they are based on a sample survey rather than a complete census. Mistakes originating in the collection and processing of the data are also possible. To correct for the random errors inherent in all sample surveys, standard errors are associated with each estimate in the NCVS.

Unless otherwise noted, comparisons of two or more numbers meet the statistical test that the differences are equal to at least 2.0 standard errors, or, in other words, that differences of this size would be produced by sampling variability 5% of the time, at most. Such differences are considered to be statistically significant. Statements qualified by phrases like "some evidence" and "marginal" have met the statistical test that differences of this size would be produced by sampling variability 10% of the time, at most.

The victimization rates in this report are calculated on the basis of 1,000 persons age 12 or over or on the basis of 1,000 households. Because of varying population and household growth over time, rates are used to standardize the crimes measured.

Most of the comparisons in this report are between a victimization rate (or a percentage reported to the police) for a specific crime in one year and the corresponding rate in another year. These comparisons may be for crime totals or for categories within a given type of crime. Many compare various population groups (for example, females or persons age 12-15).

The term *trend* is used to describe changes in a series over time. This report analyzes trends in crime victimization rates of major crimes recorded during the entire 20-year period from 1973 to 1992. For personal crimes of violence, differences in victimization trends according to the sex, age, and race of the victims are identified. For household crimes, the focus is on differences in victimization trends by race of head of household, form of household tenure, and household size.

No attempt is made to compare the differences of victimization trends between the crime categories. Comparisons presented here deal with subcategories of the same crime or the variables previously indicated.

Glossary, 134

General trends

Since the inception of the NCVS (formerly NCS) in 1973 it has been possible to trace fluctuations in crime levels and rates over extended periods. The level of crime, overall, has decreased since its peak year in 1981. Over 41 million personal and household crimes were committed in 1981 compared to more than 33 million in 1992 — a decrease of 19%. However, rates for the major crimes have tended to fluctuate from year to year:

The victimization rate for violent crimes increased between 1977 and 1981. The 1981 rate of 35.3 violent crimes per 1,000 persons was significantly higher than at anytime prior to 1977. After 1982 the violent crime rate declined until it reached its low between 1986 and 1989. By 1992 the rate had risen to 32.1 crimes per 1,000.

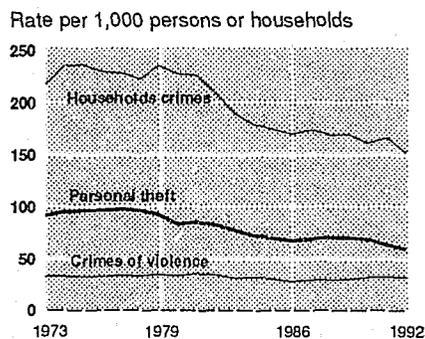

The rate of personal theft victimization increased significantly in 1974 to 95.1 thefts per 1,000 persons and remained near this level through 1978. After this point the rate declined steadily through 1985. The rate of personal theft victimization changed little until it decreased significantly in 1991 and then again in 1992, to reach an all-time low of 59.2 per 1,000.

Household victimization rates fluctuated between 1973 and 1981. The rate dropped significantly, to 208.2 crimes per 1,000 households, in 1982 and again in 1983 and 1984. From 1985 through 1989 rates remained stable but declined again in both 1990 and 1992. At 152 crimes per 1,000 households, the 1992 rate was the lowest household crime rate ever recorded by the survey.

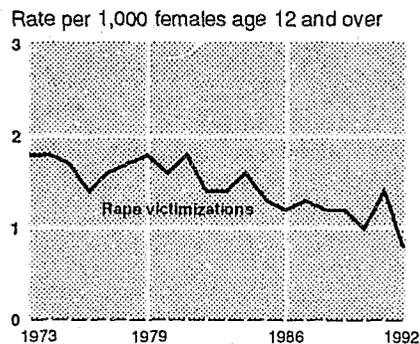

Female rape

Compared to the other crimes that the NCVS measures, the number of rape cases is very small. As such, significant changes in levels and rates of this crime are difficult to detect (see *Methodology*, pg. 131). No trend was ap-

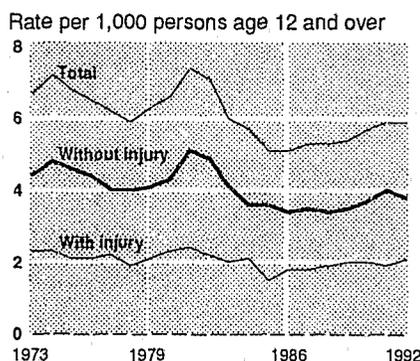

Victimization rate trends, 1973-92

Robbery: Victimization rates, 1973-92

Trends in personal crimes of violence

parent for females in any age group nor in the overall measure of this crime. The only discernible patterns were in the rapes of white and black females. Generally, the rate for white females declined after 1984 and remained near this level through 1992. For black females a decline in the rape rate occurred after 1989.

Robbery

The rate of robbery victimization was 6.7 per 1,000 persons in 1973. By 1985 the rate had declined to 5.1 per 1,000. Rates recorded from 1985 through 1990 were generally lower than those prior to 1981. There were 5.9 robberies per 1,000 persons in 1992.

The pattern of robbery victimization for males was very similar to that for the overall robbery rate. There was little detectable change in the robbery rate for females throughout the 1970's. In 1981 the rate peaked at 5.2 robberies per 1,000 females and remained near this level through 1982. After 1982 the rate declined, returning to its previous levels.

Trends were difficult to discern within the various age categories. Persons from 25 to 34 years of age had a higher robbery rate in 1982 than at any point in the 1970's. For victims age 50 and older, robbery rates measured after 1983 were generally lower than those measured in the 1970's.

Prior to 1982, no clear trend in robberies of whites was apparent. After this time the rates began to decline. The robbery rates for whites recorded from 1985 through 1990 were generally lower than those prior to 1982. Little change was measurable in the robbery rates for blacks throughout the 1970's. The rates from 1976 through 1979 were lower than the rate of 16.9 robberies per 1,000 blacks reached in

1981. At 8.6 robberies per 1,000, the 1986 rate was lower than any other years except 1985 and 1988.

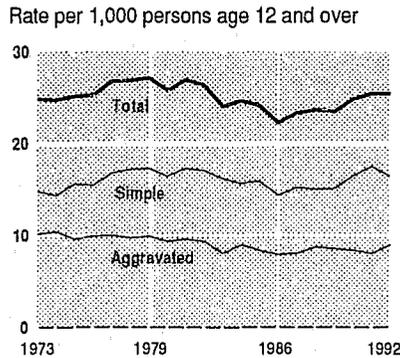

Assault

The first measurable increase in the rate of assault victimization occurred in 1977 when the rate rose to 26.8 crimes per 1,000 persons, up from 24.9 per 1,000 in 1973. The rate remained fairly stable from 1977 through 1982 but declined thereafter. At 22.3 crimes per 1,000, the total assault rate was lower in 1986 than in any previous year. After 1990 the rate returned to levels similar to those experienced in the early 1970's. There was little significant change in the aggravated assault rate during the early years of the survey, however, the rate declined after 1982. At 8 aggravated assaults per 1,000 in 1983, the rate was lower than that of any previous year. Aggravated assaults remained near this level through 1992. The simple assault rate first increased in 1977. The rate in 1973 was 14.8 assaults per 1,000, and in 1977 the rate was 16.8 per 1,000. After a period of stability through 1982, the rate declined to levels similar to those of the early 1970's. After 1989 the rate began to rise again.

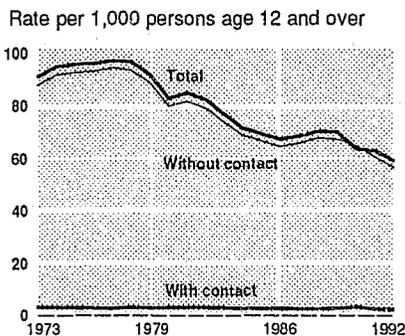

The assault rate for males increased significantly in 1977 to 37.5 assaults per 1,000 and remained high until 1982. The rate then declined, reaching a low of 28.8 per 1,000 in 1986, and remained at low levels until 1991, when, at 33.5 per 1,000, the rate returned to a level similar to those measured in the early 1970's. Throughout the 20-year period, no clear pattern was distinguishable in the assault rate for females.

For most age categories, rates tended to remain stable over the 20-year period. The assault rates for persons 12 to 19 years of age increased toward the end of the period. For persons 20 to 34 years of age, rates generally

Assault: Victimization rates, 1973-92

Personal larceny: Victimization rates, 1973-92

reached their high points in the late 1970's.

The rate of assault victimization for whites first increased to 26.8 assaults per 1,000 in 1977. The rate declined after 1982, reaching 22.2 assaults per 1,000 in 1986 — a rate lower than any previous year. The assault rate remained near this level for the next 4 years, but after 1990, returned to levels like those of the early 1970's. For blacks no clear pattern in assault rates was evident over time.

Personal theft

The rate of victimization from personal theft increased from 91.1 thefts per 1,000 persons in 1973 to 95.1 per 1,000 in 1974. The rate remained near this level until 1979, when it decreased to 91.9 thefts per 1,000 — a rate similar to that of 1973. The rate generally continued to decrease, reaching 59.2 thefts per 1,000 in 1992, the lowest rate of theft recorded in 20 years.

No clear trend in rates of personal larceny with contact was apparent over the 20-year period. This crime category consists of purse snatching and pocket picking; comparatively few of these victimizations are recorded each year. The majority of the personal crimes of theft consist of larcenies without contact between victim and offender. Thus these crimes displayed a pattern similar to that for total thefts. In 1973 the rate of personal larceny without contact was at 88 thefts per 1,000 persons which decreased to 56.8 by 1992, the lowest figure recorded.

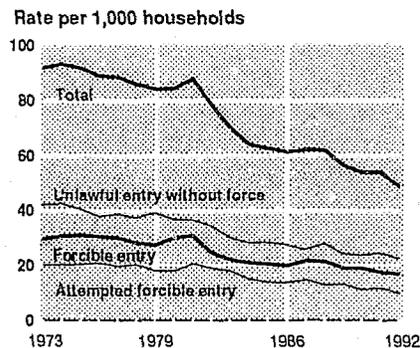

The theft rate of males also followed the pattern for thefts overall. However, the rate remained stable between 1986 and 1989 and declined to 62.6 thefts per 1,000 in 1992. In 1973 the rate had been 102.8 thefts per 1,000 males. The theft victimization rate for

females increased between 1973 and 1978. After this point the rate began to decline, reaching 55.9 thefts per 1,000 females in 1992.

Overall, each age group showed a decline in the theft victimization rate over the 20-year period, though the magnitude of this decline was greater for some than for others. The rate for persons 12 to 15 years of age declined fairly steadily to 95.3 thefts per 1,000 persons in 1992, from 171.2 per 1,000 in 1973 — a decrease of 44%. For 16 to 19 year-olds the decline resulted in a 41% drop between 1973 and 1992. The trend for other age categories was generally toward increasing rates until the late 1970's, when the rates began to drop. The magnitude of the decline in the theft rate was also lower for those age 20 or older. Between 1973 and 1992, for example, the theft victimization rate for persons 20 to 24 years of age declined by 20%; for 25 to 34 year-olds it declined 26%; for 35 to 49 year-olds, 25%; 50 to 64 year-olds, 29%; and for those 65 or older the decrease was 27%.

The trend in theft victimizations of whites resembled the overall theft pattern. The rate reached a low of 58.8 thefts per 1,000 persons in 1992. For blacks, a low rate of 67.9 thefts per 1,000 was first reached in 1984; the estimate fluctuated through 1992 but did not change by statistically significant amounts.

Burglary: Victimization rates, 1973-92

Burglary

Burglary rates displayed a general downward trend until 1984. From 1984 through 1988 the rate was stable but it began to drop again in 1989. At 48.9 burglaries per 1,000 households in 1992, the rate had declined 47% from the 1973 figure of 91.7 burglaries per 1,000 and was at an all-time low.

The rate of burglaries involving forced entry remained relatively stable throughout the 1970's but declined in 1982 to 24.7 crimes per 1,000 households. After another significant decrease in 1983, the rate stabilized and remained near this level through 1988 before declining again. By 1992 the rate of burglary with forced entry had decreased to 16.5 per 1,000. For unlawful entries without force, the rate first declined in 1976, stabilized through 1981 and then declined fairly steadily until 1989. Attempted forcible entries first decreased significantly in 1979 to 17.9 crimes per 1,000 households. In 1984 the rate dropped again and continued to decline slowly. In 1992 there were 10 attempted forcible entries per 1,000 households.

Households headed by whites experienced declining burglary rates after 1975. The rate dropped sharply in 1982, to 73.4 burglaries per 1,000 white households, and dropped again in 1983 and 1984. The rate was fairly stable until 1989, at which time it began to decline. White households experienced 46.4 burglaries per 1,000 in 1992. Households headed by blacks experienced a pattern similar to that of households headed by whites. In 1973 the rate was 132.5 burglaries per 1,000 black households. It began to decrease after 1976, dropping sharply in 1983 to 97.9 burglaries per 1,000 households. After this point there was stability in the rate until it began to decrease in the late 1980's. Burglary rates for households headed by other races decreased from 109.2

Trends in household crimes

per 1,000 in 1973 to 44.3 per 1,000 households in 1992.

Homeowners experienced a decline in burglary rates between 1977 and 1983. The rate was stable from 1984 through 1988 but dropped again after 1989. The burglary rate for homeowners was 76.3 per 1,000 households in 1973 and 39.4 per 1,000 in 1992. For those renting their homes, burglary rates were relatively stable from 1973 through 1979. The rate began to decrease in 1980 but stabilized between 1985 and 1988. The burglary rate for renters reached its low in 1992 at 65.8 per 1,000 households.

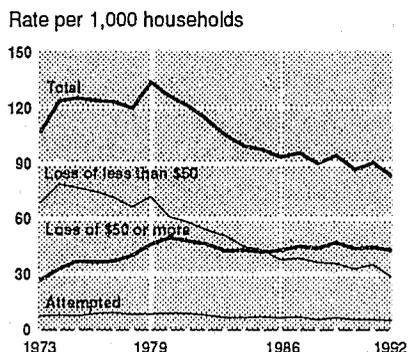

The burglary rate for single-person households was 93.1 per 1,000 in 1973. The rate gradually decreased until 1985 but changed little after this point. In 1992 the burglary rate was 41.5 per 1,000 for single-person households. Households of two to three persons showed a similar trend in burglary rates, with a period of stability between 1984 and 1989. The 1992 rate was 46.4 burglaries per 1,000 households, down from 85.8 per 1,000 in 1973. Patterns for households consisting of four or more members also displayed a general downward trend, particularly after 1981; more specific patterns were difficult to discern.

Household larceny

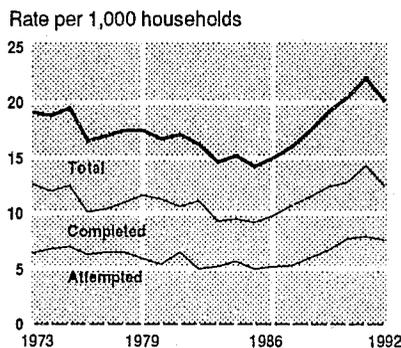

Household larceny rates increased significantly in 1974 and remained at this level through 1978. After 1979 the rate began to decline reaching 83.2 larcenies per 1,000 households in 1992. This estimate was lower than for any previous year except 1990.

Rates for larcenies involving losses of less than \$50 decreased very steadily after 1974 to 28.8 crimes per 1,000 households in 1992, down from 68.7 per 1,000 in 1973 — a 58% decline. Rates for larcenies involving larger

Household larceny: Victimization rates, 1973-92

Motor vehicle theft: Victimization rates, 1973-92

losses — \$50 or more — actually increased by 61%. However, it should be noted that these losses have not been adjusted for inflation, which may in part account for this apparent trend.

Larceny rates for households headed by whites were generally stable throughout the early part of the 1970's. The rate fluctuated during the late 1970's before reaching its peak of 133.5 larcenies per 1,000 households in 1979. After this point the rate declined. In 1992 the larceny rate for households headed by whites was 82.3 per 1,000. For black households, larceny victimization rates decreased overall from 103.7 per 1,000 households in 1973 to 93.6 per 1,000 in 1992. The decrease was not statistically significant. Rates for households headed by members of other racial groups fluctuated greatly, and patterns were difficult to discern. However, rates recorded after 1982 were generally lower than in previous years.

Home owners experienced stability in larceny victimization rates from 1974 through 1981. After this point, the rate declined slowly. Persons renting their homes also had larceny rates that remained stable through most of the 1970's, however, the rate increased significantly in 1979 to 165.1 larcenies per 1,000 households. The rate then declined to 102.8 larcenies per 1,000 by 1992.

Trends in household larceny rates did not vary much according to the number of persons in the household. Households with five or fewer members showed a slight increase in rates until 1979, followed by a decrease. Households with six or more members did not show any clear trend.

Motor vehicle theft

The motor vehicle theft rate decreased significantly in 1976 to 16.5 thefts per 1,000 households, down from 19.1 thefts per 1,000 in 1973. The rate

Trends in households crimes

remained near this level for several years before declining again in 1983 to 14.6 per 1,000. By 1989 the rate had increased, returning to a level similar to those of the early 1970's; the rate remained at this level through 1992. Completed motor vehicle thefts followed a pattern similar to that for total thefts; attempted motor vehicle thefts showed no distinctive pattern.

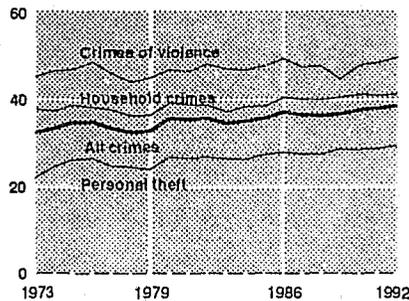

Rates for households headed by whites also displayed a trend similar to that for total motor vehicle thefts. Households headed by blacks did not show a consistent trend, however, motor vehicle theft rates were higher toward the end of the 20-year period compared to previous years. No pattern was discernible for households headed by other racial groups.

The rate of motor vehicle theft for households owning their homes began to decline after 1980. The rate for homeowners was 14.8 thefts per 1,000 households in 1973 and 12.6 per 1,000 in 1981. Toward the end of the 20-year period the rate increased and returned to a level similar to those recorded in the early 1970's. For persons renting their homes no clear pattern emerged.

No consistent trend was shown in the rates of motor vehicle theft for single-person households or for households consisting of six or more members. For those comprised of two or three persons, the rate was 18.7 thefts per 1,000 households in 1973. It decreased to 15.3 motor vehicle thefts per 1,000 households in 1976 but returned to its previous level by 1978. Rates were stable from 1984 to 1988 and generally lower than those prior to 1976. Four or five person households experienced a decline to 18.8 motor vehicle thefts per 1,000 households in 1977, down from 23.9 thefts per 1,000 in 1973. The rate remained near this level until 1989. The rate then returned to a level similar to those seen in the early and mid-1970's.

Trends in crimes reported to the police

Police reporting: Percentage reported, 1973-92

The rate at which victims reported crimes to the police varied over the years. In 1974 the proportion of crimes reported to law enforcement officials rose to 33.5% from 32.4% in 1973. The reporting rate increased again in 1975 but began to decrease after 1976. The proportion of crimes reported rose in 1980 and was fairly stable thereafter until an increase in 1986. Thirty-seven percent (37.2%) of all crimes were reported to the police in 1986. The reporting rate remained near this point through 1992.

In specific crime categories trends were harder to detect. The reporting rate for violent crimes fluctuated over the 20-year period, and a consistent pattern was difficult to discern. Personal thefts displayed a pattern similar to the overall, however, the reporting rate remained stable after 1980, without a significant increase in 1986. Larger proportions of household crimes were reported toward the end of the 20-year period.

No pattern was detectable in reporting rates by race for violent crimes. For whites, the pattern of reporting thefts was similar to that for total crimes overall, but the proportion of thefts reported did not generally increase after 1980. For blacks no consistent trend was shown. The rate of reporting household crimes increased after 1985 for households headed by whites. For households headed by blacks no clear pattern was detected.

Reporting rates for violent crimes varied little by the age or sex of the victim.

Appendix I

Survey data tables, 1973-92 trends

The tables in this appendix contain selected data for the United States from the National Crime Victimization Survey for calendar years 1973 through 1992.

All data generated by the survey are estimates. They vary in their degree of reliability and are subject to sampling error because they are derived from a sample survey. Constraints on interpretation and other uses of this data, as well as guidelines for determining their reliability, are shown in Appendix II. As a general rule, estimates based on about 10 or fewer sample cases have been considered unreliable. Such estimates, qualified by footnotes to the tables, were not used for analytical purposes. Each table contains estimates of the size of every relevant group upon which the rates are based.

Data for 1980, 1984, and 1987 in these tables may not match the data published in the respective year's annual report. The 1980 data published in this report are based on 1980 census population counts, while the figures in the 1980 edition of *Criminal Victimization in the United States* were based on the 1970 census population. In addition, the 1984 estimates in this report were recalculated to include robberies and assaults which occurred during a commercial crime, crimes which were not included in the 1984 annual report. For a discussion pertaining to the inclusion of these crimes, see *Criminal Victimization in the United States, 1985*. The recalculated 1984 figures were used here in order to make the comparisons compatible with the later years.

Data on locality of residence for 1985 were not published in the 1985 annual report but are included here. The 1985 locality of residence tables presented here should be used with caution since these tables contain geographic information based on both the 1970 and the 1980 decennial census-

es. Beginning with the 1986 locality of residence tables, 1980 decennial census geographic definitions are used. Because there were a large number of changes in locality classifications between 1970 and 1980, particularly in urban areas of the United States, 1985 through 1992 locality of residence tables are not strictly comparable to tables for years prior to 1985.

Computer-assisted telephone interviewing (CATI), a new interviewing technique, was first implemented in 1987 and has been used on a small portion of the sample since then. The 1987 data shown here includes figures obtained by using CATI; however, the data published in *Criminal Victimization in the United States, 1987* did not. This portion of the data was excluded from the final analysis until tests conclusively showed that CATI did not detrimentally affect the data.

A redesigned survey instrument was phased into the NCVS sample design over a period of five years, from 1989 through 1993. Initially, the revised questionnaire was administered to approximately 5% of the sample. The proportion of the sample receiving this redesigned version was increased gradually in order to maintain as much compatibility as possible with previous years' estimates. By 1992 approximately 50% of households were interviewed using the revised questionnaire. Data from households receiving this questionnaire were not used in this report. It should be noted that with the exclusion of these sample cases, standard errors for 1992 are larger than those in recent years, and, thus, larger differences between two numbers are needed in order to be declared significantly different. Also, since the composition of the sample areas was changing as the new questionnaire was phased in, the consistency of certain types of geographic and demographic estimates may be reduced.

The interview response rate averaged about 96% of all eligible housing units. The race and ethnicity of the field representatives generally match those of the local population. About 90% of NCVS field representatives are women.

	Rate	3.1	1.3 *	1.8	

Note: Rates are the number of victimizations per 1,000 persons in each age group.
 Detail may not add to total because of rounding.

*Estimate is based on about 10 or fewer sample cases.

1992	Number	311,600	39,140	272,450	18,015,410
	Rate	17.3	2.2 *	15.1	

Note: Rates are the number of victimizations per 1,000 persons in each age group.

Detail may not add to total because of rounding.

*Estimate is based on about 10 or fewer sample cases.

Appendix II Survey methodology and standard errors

The survey results contained in this report are based on data gathered from residents living throughout the United States, including persons living in group quarters, such as dormitories, rooming houses, and religious group dwellings. Crew members of merchant vessels, Armed Forces personnel living in military barracks, and institutionalized persons, such as correctional facility inmates, were not included in the scope of this survey. Similarly, U.S. citizens residing abroad and foreign visitors to this country were excluded. With these exceptions, individuals age 12 or older living in units designated for the sample were eligible to be interviewed.

Data collection

Each housing unit selected for the National Crime Victimization Survey (NCVS) remains in the sample for 3 years, with each of seven interviews taking place at 6-month intervals. An NCVS interviewer's first contact with a housing unit selected for the survey is in person, and, if it is not possible to secure face-to-face interviews with all eligible members of the household during this initial visit, interviews by telephone are permissible thereafter. The only exceptions to the requirement that each eligible person be interviewed apply to incapacitated persons and individuals who are absent from the household during the entire field-interviewing period.

Since July 1986, unless a knowledgeable household member insisted otherwise, 12- and 13-year-olds have been interviewed directly by the interviewer. This differs from the previous practice of interviewing a knowledgeable adult as a proxy respondent for all 12- and 13-year olds, unless the adult insisted that the child be interviewed and the alternative was no interview at all. In the case of temporarily absent household members and persons who are physically or mentally incapable of granting interviews, interviewers may

accept other household members as proxy respondents, and in certain situations non-household members may provide information for incapacitated persons.

Prior to February 1980 the second through seventh interviews were conducted in the same manner as the initial interview. At that time, however, the mode of interviewing was changed to cut data collection costs. Telephone interviewing was increased, and in-person interviewing was reduced. This change was implemented in a manner that reduced the possibility of biasing the results. For half the remaining interviews at a sample address, the procedure was the same as that used for the entire sample prior to February 1980: the third, fifth, and seventh interviews were conducted primarily in person, with telephone followup permitted. The three even-numbered interviews were conducted as often as possible by telephone. Beginning in March 1986 all interviews were done by telephone whenever possible, except for the first and fifth interviews, which are still primarily conducted in person. Before February 1980, about 20% of the interviews were completed by telephone, as compared to about 50% until March 1986. The percentage of telephone interviews is approximately 75% currently. The results of an assessment of the change in the data collection mode on results for 1980 were reported in the initial data release for that year.¹

Sample design and size

Survey estimates are based on data obtained from a stratified, multi-stage cluster sample. The primary sampling units (PSU's) composing the first stage of the sampling were counties, groups of counties, or large metropolitan areas. Large PSU's were included in

the sample automatically and are considered to be self-representing (SR). The remaining PSU's, called non-self-representing (NSR), were combined into strata by grouping PSU's with similar demographic characteristics, as determined by the 1980 census. One PSU was selected from each stratum by making the probability of selection proportionate to the population of the PSU.

In June 1984 a sample cut resulted in the reduction of NSR strata from 220 to 153. This also included a 20% sample reduction in the larger of the 156 PSU's. Phase-in of a revised NCVS sample design based on 1980 census data began in January 1985. Households that were interviewed during 1987 were drawn from both the 1970 and the 1980 based sample designs. The 1980 design consists of 84 SR PSU's and 153 NSR strata, with one PSU per stratum selected with probability proportionate to size. Because part of the reduction in the number of SR PSU's is due to a different procedure for drawing PSU boundaries, especially in the New England States, the 156 PSU's in the 1970 design are equivalent to 130 PSU's in the current design. Even with this smaller number of sample areas, the reliability of estimates has been maintained by using crime-related characteristics in the formation of the strata and by improving sample selection within the PSU's.

The remaining stages of sampling were designed to ensure a self-weighting probability sample of dwelling units and group quarters within each of the selected areas.² This involved a systematic selection of enumeration districts (geographic areas used for the 1980 census), with a probability of selection proportionate to their 1980 population size, followed by the selection of clusters of approxi-

¹See *Criminal Victimization in the United States; 1979-80 Changes, 1973-80 Trends*, BJS Technical Report, NCJ-80838, July 1982.

²Self-weighting means that each sample housing unit had the same initial probability of being selected.

mately four housing units each from within each enumeration district.³ To account for units built within each of the sample areas after the 1980 census, a sample was drawn, by means of an independent clerical operation, of permits issued for the construction of residential housing. Jurisdictions that do not issue building permits were sampled using small land-area segments. These supplementary procedures, though yielding a relatively small portion of the total sample, enabled persons living in housing units built after 1980 to be properly represented in the survey. With the passage of time, newly constructed units account for an increased proportion of the total sample.

In order to conduct field interviews, the sample was divided into six groups, or rotations, each of which contained housing units whose occupants were to be interviewed once every 6 months over a period of 3 years. The initial interview was used to bound the remaining interviews, (i.e., establish a timeframe to avoid duplication of crimes on subsequent interviews), but it was not used to compute the annual estimates. Each rotation group was further divided into six panels. Persons occupying housing units within a sixth of each rotation group, or one panel, were interviewed each month during the 6-month period. Because the survey is continuous, additional housing units are selected in the manner described, and assigned to rotation groups and panels for subsequent incorporation into the sample. A new rotation group enters the sample every 6 months, replacing a group phased out after being in the sample for 3 years.

Among the housing units designated for the sample, interviews were obtained at 6-month intervals from the

³All references to the 1980-based sample design also apply to the 1970-based design.

occupants of each housing unit. The occupants of a small fraction of the sampled housing units were not interviewed because the units were vacant, demolished, converted to nonresidential use, or ineligible for some other reason. A minority of these noninterviewed units were occupied by persons who could not be reached after repeated visits, declined to be interviewed, were temporarily absent, or were otherwise unavailable.

Estimation procedure

To enhance the reliability of the estimates in this report, the estimation procedures utilized additional data concerning population characteristics which are believed to affect victimization rates. This data was used in various stages of ratio estimation.

The estimation procedure provides quarterly estimates of the levels and rates of victimization. Sample data from 8 months of field interviewing are required to produce estimates for each quarter. For example, data collected between February and September are required to estimate the first quarter of any given calendar year (see accompanying chart). Each quarterly estimate is composed of equal numbers of field observations from the months during the half-year interval prior to the time of interview. Therefore, incidents occurring in January may be reported in a February interview (1 month between the crime and the interview), in a March interview (2 months), and so on up to 6 months ago for interviews conducted in July. This arrangement minimizes expected biases associated with the tendency of respondents to place victimizations in more recent months of a 6-month reference period rather than the month in which they actually occurred.

Annual estimates are derived by accumulating data from the four quarterly estimates, which in turn are obtained from 17 months of field interviewing,

ranging from February of one year through June of the following year. The population and household figures shown on victimization rate tables are based on an average for these 17 months, centering on the ninth month of the data collection period.

The estimation procedure begins with the application of a basic weight to the data from each individual interviewed. A basic weight is the reciprocal of the probability of each housing unit's selection for the sample, and provides a rough measure of the population represented by each person in the sample. Next, an adjustment was made to account for occupied units as well as individuals in occupied units who were selected for the survey but unavailable for interview.

The distribution of the sample population usually differs somewhat from that of the total population in terms of age, race, sex, residence, and other characteristics. Because of this, an additional stage of ratio estimation was employed to bring the two distributions into closer agreement, thereby reducing the variability of the sample estimates.

The first stage of ratio estimation was applied only to data obtained from non-self-representing sample areas. Its purpose was to reduce the error caused by selecting one area to represent an entire stratum. Ratios concerning race and residence were calculated to reflect the relationship between the weighted 1980 census counts for all the sample areas in each region and the population in the non-self-representing parts of the region.

The second stage of ratio estimation was applied on an individual basis in order to bring the distribution of individuals in the sample into closer agreement with independent current estimates of the population according

Appendix II

to the characteristics of age, sex, and race.⁴

For household crimes, the characteristics of the wife in a husband-wife household and the characteristics of the head of household in other types of households were used to determine the ratio estimates. This procedure is considered more precise than simply using the characteristics of the head of household since sample coverage is generally better for females than males.

In order to estimate *incidents* as opposed to *victimizations*, further adjustments were made to those cases where an incident involved more than one person. These incidents had more than one chance of being included in the sample so each multiple-victimization was reduced by the number of victims. Thus, if two people were victimized during the same incident, the weight assigned to that incident was reduced by one half so that the incident could not be counted twice. However, the details of the event's outcome as they related to the victim were reflected in the survey results. No adjustment was necessary in estimating data on household crimes because each separate crime was defined as involving only one household.

Series victimizations

A series victimization is defined as 3 or more similar but separate crimes which the victim is unable to recall individually or describe in detail to an interviewer. These crimes have been excluded from the tables in this report because the victims were unable to provide details for each event.

Prior to 1979, NCVS interviewers recorded series victimizations by the season(s) of occurrence within the

⁴Armed forces personnel who are eligible to be interviewed are not included in the second stage ratio estimate.

Month of interview by month reference

(X's denote months in the 6-month reference period)

Month of interview	Period of reference											
	First quarter			Second quarter			Third quarter			Fourth quarter		
	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
January												
February	X											
March	X	X										
April	X	X	X									
May	X	X	X	X								
June	X	X	X	X	X							
July	X	X	X	X	X	X

June												X
July												

6-month reference period, and the data were tabulated by the quarter of the year in which they were collected. Since January 1979, however, data on series crimes has been tabulated by the calendar quarter(s) of occurrence, making it possible to match the timeframes used in tabulating the data for non-series crimes.

From January through June of 1985, a followup questionnaire was administered to persons reporting series crimes. This questionnaire addressed issues relating to the methods of collecting and analyzing data on series crimes. Results of this test are contained in *Series Crimes: Report of a Field Test*, BJS Technical Report NCJ-104615, April 1987. Further tests of approaches to collecting data on series crimes are anticipated.

Reliability of estimates

The sample used for the NCVS is one of a large number of possible samples of equal size that could have been obtained by using the same sample design and selection procedures. Estimates derived from different

samples would differ somewhat. The standard error of a survey estimate is a measure of the variation among the estimates from all possible samples. Therefore, it is a measure of the precision with which a particular estimate approximates the average result of all possible samples. The estimate and its associated standard error may be used to construct a confidence interval. A confidence interval is a range of numbers which has a specified probability that the average of all possible samples, which is the true unknown value of interest, is contained within the interval. About 68% of the time, the survey estimate will differ from the true average by less than one standard error. Only 10% of the time will the difference be more than 1.6 standard errors, and just one time in a hundred will it be greater than 2.5 standard errors. A 95% confidence interval is the estimate plus or minus twice the standard error, thus there is a 95% chance that the result of a complete census would fall within the confidence interval.

In addition to sampling error, the estimates in this report are subject to non-

sampling error. Major sources of non-sampling error are related to the ability of the respondents to recall in detail the crimes which occurred during the 6 months prior to the interview. Research based on interviews of victims obtained from police files indicates that assault is recalled with the least accuracy of any crime measured by the NCVS. This may be related to the tendency of victims to not report crimes committed by offenders who are not strangers, especially if they are relatives. In addition, among certain groups, crimes which contain elements of assault could be a part of everyday life, and are therefore forgotten or not considered important enough to mention to a survey interviewer. These recall problems may result in a substantial understatement of the actual rate of assault.

Another source of nonsampling error is the inability of some respondents to recall the exact month a crime occurred, even though it was placed in the correct reference period. This error source is partially offset by interviewing monthly and using the estimation procedure described earlier. Telescoping is another problem in which incidents that occurred before the reference period, or in a few cases, after it, are placed within the period. Events which occurred after the reference period are considered extremely rare because 75% to 80% of the interviewing takes place during the first week of the month following the reference period. The effect of telescoping is minimized by using the bounding procedure previously described. The interviewer is provided with a summary of the incidents reported in the preceding interview, and, if a similar incident is reported, it can then be determined whether the reported crime is a new one or not by discussing it with the victim. As calculated for the NCVS, the standard errors partially measure only those nonsampling errors arising from these sources; they do not reflect any systematic biases in the data.

Methodological research indicates that substantially fewer incidents of crime are reported when one household member reports for all individuals residing in the household than when each person is interviewed individually. Therefore, the self-response procedure was adopted as a general rule; allowances for proxy response under the contingencies discussed earlier are the only exceptions to this rule.

Other sources of nonsampling error result from other types of response mistakes, including errors in reporting incidents as crimes, misclassification of crimes, systematic data errors introduced by the interviewer, errors made in coding and processing the data, and biases resulting from the rotation patterns and incomplete sampling frames in the 1970-based design. The last problem has been corrected in the 1980-based design, and quality control and edit procedures are used to minimize errors made by respondents and interviewers.

Computation and application of standard errors

The results presented in this report were tested to determine whether or not the observed differences between groups were statistically significant. Differences were tested for significance at the 90-percent confidence level, or roughly 1.6 standard errors. Most of the comparisons in this report were significant at the 95-percent confidence level (about 2.0 standard errors, meaning that the difference between the estimates is greater than twice the standard of the difference).

Comparisons which failed the 90-percent test were not considered statistically significant. Comparisons qualified by the phrase "some evidence" had a significance level between 90% and 95%.

Standard errors for changes in the rates or percentages of crimes in non-

consecutive years can be computed with the following formula:

Formula 1.

$$s.e.(r2-r1) = \sqrt{\frac{r1(1-r1)b1}{y1} + \frac{r2(1-r2)b2}{y2}}$$

where

r1 = the rate for the first year of the comparison expressed in decimals (for example, a rate of 39 per 1,000 becomes .039)

y1 = the number of persons or households in the group on which the first rate is based

r2 = the rate for the second year of the comparison expressed in decimals

y2 = the number of persons or households in the group on which the second rate is based

b1,b2 = constants for the 2 years in the comparison, which were obtained when generalizing the standard errors. The specific values for the constants are as follows:

1973-77:	1821	1987:	3156
1978:	2616	1988:	3181
1979:	2509	1989:	3528
1980-83:	2355	1990:	3725
1984:	2884	1991:	4717
1985:	3015	1992:	7549
1986:	3102		

An example of the use of this formula, drawn from table 10 of this report follows. The rate for robbery decreased from 6.7 per 1,000 in 1973 to 5.3 per 1,000 in 1987, and the appropriate values for those years are b1= 1821 and b2= 3156. Substituting the values in the formula yields:

Standard error of the difference (.0067-.0053)=

$$\sqrt{\frac{.0067(1-.0067)(1821)}{164,382,900} + \frac{.0053(1-.0053)(3156)}{197,728,980}}$$

=.00038 or .4 per 1,000

Appendix II

The formula used for testing rates for nonconsecutive years could be used for consecutive years, but it would tend to give a substantial overestimate of the standard error. This is because of the positive correlation between estimates from consecutive years since many of the same households are interviewed in both years. The preferred method for consecutive years follows.

When comparing the rates for *consecutive years*, compute the relative change in rates, i.e., r_2-r_1/r_1 by using the following formula:

Formula 2.

$$\frac{r_2-r_1}{r_1} = \frac{r_2}{r_1} \sqrt{b \left[\frac{1-r_1}{y_1 r_1} + \frac{1-r_2}{y_2 r_2} \right]}$$

where

r_1 = the rate for the first year of the comparison expressed in decimals (for example, a rate of 52 per 1,000 becomes .052)

y_1 = the number of persons or households in the group on which the first rate is based

r_2 = the rate for the second year of the comparison expressed in decimals

y_2 = the number of persons or households in the group on which the second rate is based

b = a constant, the value for which varies depending on the consecutive years being compared. The specific value for the constant depends on the more recent of the 2 years being compared, as follows:

77:	1603	1986:	3478
	1986	1987:	2755
1979:	2256	1988:	2790
1980:	2142	1989:	2958
1981-83:	2073	1990:	3196
1984:	2318	1991:	3743
1985:	2597	1992:	7162

To illustrate the use of the formula, table 17 shows that assault rose from 26.9 per 1,000 in 1978 to 27.2 per 1,000 in 1979.

The relative change is:

$$\frac{r_2-r_1}{r_1} = \frac{.0272-.0269}{.0269} = .0112, \text{ or } 1.12\%$$

The standard error of the relative change is:

$$\begin{aligned} & \frac{.0272}{.0269} \sqrt{2256 \left[\frac{1-.0269}{178,215,000 \cdot .0269} \right]} \\ & + \left[\frac{1-.0272}{178,284,000 \cdot .0272} \right] \\ & = .03059, \text{ or about } 3.06\%. \end{aligned}$$

Glossary

Age—The appropriate age category is determined by the respondent's age on the last day of the month before the interview.

Aggravated assault—Attack or attempted attack with a weapon, regardless of whether or not an injury occurred, and attack without a weapon when serious injury results. Serious injury includes broken bones, lost teeth, internal injuries, loss of consciousness, and any injury requiring two or more days of hospitalization.

Annual family income—The total income of the household head and all relatives living in the same housing unit for the 12 months preceding the interview. Includes wages, salaries, net income from businesses or farms, pensions, interest, dividends, rent, and any other form of monetary income. The incomes of people who are not related to the head of the household are not included.

Assault—An unlawful physical attack or threat of attack. Assaults may be classified as aggravated or simple. Rape and attempted rape are excluded from this category, as well as robbery and attempted robbery. The severity of assaults ranges from minor threat to incidents which are nearly fatal.

Attempted forcible entry—A form of burglary in which force is used in an attempt to gain entry.

Burglary—Unlawful or forcible entry or attempted entry of a residence. This crime usually, but not always, involves theft. The illegal entry may be by force, such as breaking a window or slashing a screen, or may be without force by entering through an unlocked door or an open window. As long as the person entering has no legal right to be present in the structure a burglary has occurred. Furthermore, the structure need not be the house

itself for a burglary to take place; illegal entry of a garage, shed, or any other structure on the premises also constitutes household burglary. If breaking and entering occurs in a hotel or vacation residence, it is still classified as a burglary for the household whose member or members were staying there at the time the entry occurred.

Central city—The largest city (or grouping of cities) in a Metropolitan Statistical Area (see below).

Ethnicity—A classification based on Hispanic culture and origin, regardless of race.

Forcible entry—A form of burglary in which force is used to gain entry to a residence. Some examples include breaking a window or slashing a screen.

Head of household—A classification which defines one and only one person in each housing unit as the head. Head of household implies that the person rents or owns (or is in the process of buying), the housing unit. The head of household must be at least 18, unless all members of the household are under 18, or the head is married to someone 18 or older.

Hispanic—A person who describes himself as Mexican-American, Chicano, Mexican, Mexicano, Puerto Rican, Cuban, Central American, South American, or from some other Spanish culture or origin, regardless of race.

Household—A person or group of people meeting either of the following criteria. (1) people whose usual place of residence is the same housing unit, even if they are temporarily absent. (2) people staying in a housing unit who have no usual place of residence elsewhere.

Household crimes—Attempted and completed crimes that do not involve personal confrontation. Examples of household crimes include burglary, motor vehicle theft, and household larceny.

Household larceny—Theft or attempted theft of property or cash from a residence or the immediate vicinity of the residence. In order to occur within a house, the thief must have a legal right to be in the house (such as a maid, delivery person, or guest), as unlawful or forcible entry constitutes a burglary.

Incident—A specific criminal act involving one or more victims and offenders. For example, if two people are robbed at the same time and place, this is classified as two robbery victimizations but only one robbery incident.

Larceny—Theft or attempted theft of property or cash without involving force or illegal entry. This category is subdivided into personal larceny and household larceny.

Marital status—Every person is assigned to one of the following classifications: (1) married, which includes persons in common-law unions and those who are currently living apart for reasons other than marital discord (employment, military service, etc.); (2) separated or divorced, which includes married persons who are legally separated and those who are not living together because of marital discord; (3) widowed; and (4) never married, which includes persons whose marriages have been annulled and those who are living together and not in a common-law union.

Metropolitan area—See "Metropolitan Statistical Area".

Glossary

Metropolitan Statistical Area (MSA)

The Office of Management and Budget (OMB) defines this as a population nucleus of 50,000 or more, generally consisting of a city and its immediate suburbs, along with adjacent communities having a high degree of economic and social integration with the nucleus. MSA's are designated by counties, the smallest geographic units for which a wide range of statistical data can be obtained. However, in New England, MSA's are designated by cities and towns since these subcounty units are of great local significance and considerable data is available for them. Currently, an area is defined as an MSA if it meets one of two standards: (1) a city has a population of at least 50,000; (2) the Census Bureau defines an urbanized area of at least 50,000 people with a total metropolitan population of at least 100,000 (or 75,000 in New England). The Census Bureau's definition of urbanized areas, data on commuting to work, and the strength of the economic and social ties between the surrounding counties and the central city determine which counties not containing a main city are included in an MSA. For New England, MSA's are determined by a core area and related cities and towns, not counties. A metropolitan statistical area may contain more than one city of 50,000 and may cross State lines.

Motor vehicle—An automobile, truck, motorcycle, or any other motorized vehicle legally allowed on public roads and highways.

Motor vehicle theft—Stealing or unauthorized taking of a motor vehicle, including attempted thefts.

Non-Hispanic—Persons who report their culture or origin as something other than "Hispanic" as defined above. This distinction is made regardless of race.

Nonmetropolitan area—A place not located inside an MSA. This category

includes a variety of localities, ranging from sparsely populated rural areas to cities with populations less than 50,000.

Nonstranger—A classification of a crime victim's relationship to the offender. An offender who is either related to, well known to or casually acquainted with the victim is a nonstranger. For crimes with more than one offender, if any of the offenders are nonstrangers, then the group of offenders as a whole is classified as nonstranger. This category only applies to crimes which involve contact between the victim and the offender; the distinction is not made for personal larceny without contact since victims of this offense rarely see the offenders.

Offender—The perpetrator of a crime; this term usually applies to crimes involving contact between the victim and the offender.

Offense—A crime. When referring to personal crimes, the term can be used to refer to both victimizations and incidents.

Outside central cities—Refer to "suburban area".

Personal crimes—Rape, personal robbery, assault, personal larceny with contact or personal larceny without contact. This category includes both attempted and completed crimes.

Personal crimes of theft—Personal larceny. The theft or attempted theft of property or cash by stealth, either with contact (but without force or threat of force) or without direct contact between the victim and the offender.

Personal crimes of violence—Rape, personal robbery or assault. This category includes both attempted and completed crimes, and the crime always involves contact between the victim and the offender.

Personal larceny—Equivalent to the personal crimes of theft. Personal larceny is divided into two subgroups depending on whether or not the crime involved personal contact between the victim and the offender.

Personal larceny with contact—Theft or attempted theft of property or cash directly from the victim by stealth, not force or threat of force. Includes both purse snatching and pocket picking.

Personal larceny without contact—Theft or attempted theft of property or cash from any place other than the victim's home or its immediate vicinity, without direct contact between the victim and the offender. This crime differs from household larceny only in the location in which the theft occurs. Examples of personal larceny without contact include theft of an umbrella in a restaurant, a radio from the beach, or cash from an automobile parked in a parking lot. Occasionally, the victim may see the offender commit the crime.

Physical injury—Physical injury is measured for the three personal crimes of violence. Completed or attempted robberies that result in injury are classified as involving "serious" or "minor" assault. Examples of injuries from serious assault include broken bones, loss of teeth, internal injuries, loss of consciousness, and undetermined injuries requiring two or more days of hospitalization. Injuries from minor assault include bruises, black eyes, cuts, scratches, swelling, or undetermined injuries requiring less than two days of hospitalization. Assaults without a weapon are classified as aggravated if the victim's injuries fit the description given above of serious assault. All completed rapes are defined as having resulted in physical injury. Attempted rapes are classified as having resulted in injury if the victim reported having suffered some form of physical injury.

Glossary

Race—Racial categories for this survey are white, black, and other. The "other" category is composed mainly of Asians and American Indians. The race of the head of household is used in determining the race of the household for computing household crime demographics.

Rape—Carnal knowledge through the use of force or the threat of force, including attempts. Statutory rape (without force) is excluded. Both heterosexual and homosexual rape are included.

Rate of victimization—see "Victimization rate".

Region—The States have been divided into four groups or census regions:

Midwest—Includes the 12 States of Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

Northeast—Includes the 9 States of Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

South—Includes the District of Columbia and the 16 States of Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West—Includes the 13 States of Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

Robbery—Completed or attempted theft, directly from a person, of property or cash by force or threat of force, with or without a weapon.

Robbery with injury—Completed or attempted theft from a person, accompanied by an attack, either with or without a weapon, resulting in injury. An injury is classified as resulting from

a serious assault, irrespective of the extent of injury, if a weapon was used in committing the crime, or, if not, when the extent of the injury was either serious (broken bones, loss of teeth, internal injuries or loss of consciousness, for example) or undetermined but requiring two or more days of hospitalization. An injury is classified as resulting from a minor assault when the extent of the injury was minor (for example, bruises, black eyes, cuts, scratches or swelling) or undetermined but requiring less than two days of hospitalization.

Robbery without injury—Theft or attempted theft from a person, accompanied by force or the threat of force, either with or without a weapon, but not resulting in injury.

Series—Three or more similar but separate events, which the respondent is unable to describe separately in detail to an interviewer.

Simple assault—Attack without a weapon resulting either in minor injury (for example, bruises, black eyes, cuts, scratches or swelling) or in undetermined injury requiring less than 2 days of hospitalization. Also includes attempted assault without a weapon.

Stranger—A classification of the victim's relationship to the offender for crimes involving direct contact between the two. Incidents are classified as involving strangers if the victim identifies the offender as a stranger, did not see or recognize the offender, or knew the offender only by sight. Crimes involving multiple offenders are classified as involving nonstrangers if any of the offenders was a nonstranger. Since victims of personal larceny without contact rarely see the offender, no distinction is made between strangers and nonstrangers for this crime.

Suburban areas—A county or counties containing a central city, plus any contiguous counties that are linked

socially and economically to the central city. On data tables, suburban areas are categorized as those portions of metropolitan areas situated "outside central cities."

Tenure—The NCVS recognizes two forms of household tenancy: (1) owned, which includes dwellings that are mortgaged, and (2) rented, which includes rent-free quarters belonging to a party other than the occupants, and situations where rental payments are in kind or services.

Unlawful entry—A form of burglary committed by someone having no legal right to be on the premises, even though no force is used.

Victim—The recipient of a criminal act, usually used in relation to personal crimes, but also applicable to households.

Victimization—A crime as it affects one individual person or household. For personal crimes, the number of victimizations is equal to the number of victims involved. The number of victimizations may be greater than the number of incidents because more than one person may be victimized during an incident. Each crime against a household is assumed to involve a single victim, the affected household.

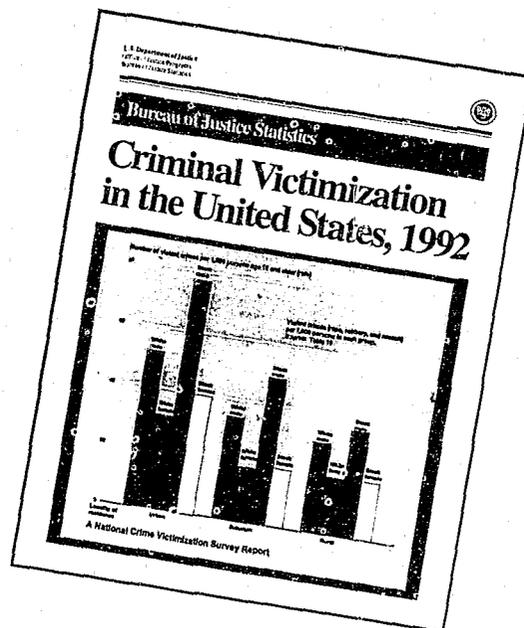

Victimization rate—A measure of the occurrence of victimizations among a specified population group. For personal crimes, this is based on the number of victimizations per 1,000 residents age 12 or older. For household crimes, the victimization rates are calculated using the number of incidents per 1,000 households.

Victimize—To commit a crime against a person or household.

Criminal Victimization in the United States, 1992

The 20th annual report on the National Crime Victimization Survey — available in early 1994 if you send in your order *now!*

Essential facts on victims, crimes, offenders, reporting to police

- More than 160 pages on crime victimization in the United States.
- Crime trends since 1973.
- Victim characteristics: Sex, age, race, ethnicity, marital status, education, family income, locality of residence, region of the United States.
- Characteristics of rapes, robberies, assaults, larcenies, burglaries, motor vehicle thefts: Time, place, distance from home, number of victims, number of offenders, self-protection, weapon use, physical injury, medical expenses, theft loss, recovery of property, days lost from work, economic losses to victims.
- Violent offender characteristics: Age, race, sex, single or multiple offenders, relationship to victim, drug and alcohol use.
- Victim households: Race, sex, age, ethnicity of household head; owner or renter; family income; number in household; length of residence.

Notice of change in distribution policy

Because of the increased cost of printing, postage, shipping, and handling, BJS can no longer mail large documents without a specific individual order.

Readers will continue to receive Bulletins and Special Reports but must order large final reports such as *Criminal Victimization in the United States, 1992*, by using the order form on this page.

BJS DATA ON CD-ROM

Crime Victimization Data, 1973-1991

The Bureau of Justice Statistics (BJS) presents crime victimization data on CD-ROM. Prepared by the Inter-university Consortium for Political and Social Research (ICPSR) at the University of Michigan, the CD-ROM contains National Crime Victimization Survey data sets, including the following:

- 1986-1990 Longitudinal File
- 1991 Full File
- Incident Level Files
- Rape Victim Sample

The BJS Crime Victimization Data CD-ROM contains ASCII files that require the use of specific statistical software packages and does not contain full-text publications. SAS and SPSS setup files are provided.

This CD-ROM can be purchased from the Bureau of Justice Statistics Clearinghouse for \$15. It is available free through ICPSR member institutions.

For more information, call 1-800-732-3277

To order your copy of the BJS Crime Victimization Data CD-ROM, please send a check or money order made out to the BJS Clearinghouse to Box 179, Annapolis Junction, MD 20701-0179.

You may also purchase the CD-ROM by using VISA or MasterCard. Please include type of card, card holder's name and address, card number, and expiration date for processing. To expedite service, you may fax your order to (410) 792-4358.

- 1988, NCJ-127202, 2/91
- Criminal defense for the poor, 1986, NCJ-112919, 9/88

BJS special reports

- Felony sentencing in the United States, NCJ-149077, 3/94
- Murder in families, NCJ-143498, 7/94
- Murder in large urban counties, 1988, NCJ-140614, 3/93
- Recidivism of felons on probation, 1986-89, NCJ-134177, 2/92
- Felony case processing in State courts, 1986, NCJ-121753, 2/90
- Felony defendants in large urban counties: National Pretrial Reporting Program 1992, NCJ-148826, 8/94
- 1990, NCJ-141872, 5/93
- National Judicial Reporting Program 1990, NCJ-145323, 12/93
- 1988, NCJ-135945, 1/93
- Felons sentenced to probation in State courts, 1986, NCJ-124944, 11/90
- Felony defendants in large urban counties, 1988, NCJ-122385, 4/90
- Felony laws of 50 States and the District of Columbia, 1986, NCJ-105066, 2/88, \$14.60
- State court model statistical dictionary: Supplement, NCJ-99326, 9/85
- 1st edition, NCJ-62320, 9/80, \$10.60

Privacy and security

Criminal justice information policy:

- Use and management of criminal history record information: A comprehensive report, NCJ-143501, 11/93
- Survey of criminal history information systems, 1992, NCJ-143500, 11/93
- Report of the National Task Force on Criminal History Record Disposition Reporting, NCJ-135836, 6/92
- Attorney General's program for improving the Nation's criminal history records: BJS implementation status report, NCJ-134722, 3/92
- Identifying felons who attempt to purchase firearms, NCJ-144393, 10/89
- Identifying persons, other than felons, who attempt to purchase firearms, NCJ-123050, 3/90, \$9.90
- Assessing completeness and accuracy of criminal history record information: Audit guide, NCJ-133651, 2/92
- Forensic DNA analysis: Issues, NCJ-128567, 6/91
- Statutes requiring use of criminal history record information, NCJ-129896, 6/91
- Original records of entry, NCJ-125626, 1/91
- Strategies for improving data quality, NCJ-115339, 5/89
- Public access to criminal history record information, NCJ-111458, 11/88
- Juvenile records and recordkeeping systems, NCJ-112815, 11/88
- Automated fingerprint identification systems: Technology and policy issues, NCJ-104342, 4/87
- Criminal justice "hot" files, NCJ-101850, 12/86
- Expert witness manual, NCJ-77927, 9/81, \$11.50
- BJS/SEARCH conference proceedings: National conference on criminal justice bulletin board systems, NCJ-145327, 2/94
- National conference on improving the quality of criminal history information, NCJ-133532, 2/92
- Criminal justice in the 1990's: The future of information management, NCJ-121697, 5/90, \$7.70
- Juvenile and adult records: One system, one record? NCJ-114947, 1/90
- Open vs. confidential records, NCJ-113560, 1/88, \$7.70
- Compendium of State privacy and security legislation: 1992 summary, NCJ-137058, 7/92
- 1992 full report (1,500pp, microfiche \$2, hard copy, NCJ-139126, \$184), 7/92

Law Enforcement Management and Administrative Statistics

LEMAS, 1990: Data for individual agencies, 100 or more officers, NCJ-134436, 9/92

BJS bulletins and special reports

- Census of State and local law enforcement agencies 1992, NCJ-142972, 7/93
- Drug enforcement by police and sheriffs' departments, 1990, NCJ-134505, 5/92
- State and local police departments, 1990, NCJ-133284, 2/92
- Sheriffs' departments, 1990, NCJ-133283, 2/92
- Police departments in large cities, 1987, NCJ-119220, 8/89
- Profile of State and local law enforcement agencies, 1987, NCJ-113949, 3/89

Drugs & crime

- Drugs and crime facts, 1993, NCJ-146246, 7/94
- State drug resources: 1994 national directory, NCJ-147706, 7/94
- Drugs, crime, and the justice system: A national report, NCJ-133652, 5/93
- Technical appendix, NCJ-139578, 6/93
- Catalog of selected Federal publications on illegal drug and alcohol abuse, NCJ-139562, 6/93
- Federal drug data for national policy, NCJ-122715, 4/90

Federal justice statistics

- Federal drug case processing, 1985-91, with preliminary data for 1992, NCJ-144392, 3/94
- Federal criminal case processing, 1982-91, with preliminary data for 1992, NCJ-144526, 11/93
- Compendium of Federal justice statistics: 1990, NCJ-143499, 9/93

Federal offenses and offenders

BJS bulletins and special reports

- Pretrial release of Federal felony defendants, 1990, NCJ-145322, 2/94
- Prosecuting criminal enterprises, NCJ-142524, 11/93
- Federal sentencing in transition, 1986-90, NCJ-134727, 6/92
- Immigration offenses, NCJ-124546, 8/90

General

BJS bulletins and special reports

- Tracking offenders, 1990, NCJ-148200, 7/94
- BJS telephone contacts, '94, NCJ-143707, 11/93

Please put me on the mailing list for:

Current BJS Publications Catalog

Law enforcement reports — National data on State and local police and sheriffs' departments: operations, equipment, personnel, salaries, spending, policies, and programs

Federal statistics — Federal case processing: investigation through prosecution, adjudication, sentencing, incarceration

Drugs and crime — Sentencing and time served by drug offenders, drug use at time of crime by jail inmates and State prisoners, and other quality data on drugs, crime, and law enforcement

Justice expenditure and employment — Spending and staffing by Federal/State/local governments and by function (police, courts, corrections, etc.)

Privacy and security of criminal history information and information policy — New State legislation; maintaining and releasing intelligence and investigative records; data quality

BJS bulletins & special reports — Timely reports of the most current justice data

State felony courts — Defendant demographics and criminal history; pretrial release, prosecution, adjudication, and sentencing; State felony laws; indigent defense

Corrections reports — Results of sample surveys and censuses of jails, prisons, parole, probation, and other corrections data

National Crime Victimization Survey reports — The only ongoing national survey of crime victims

Sourcebook of Criminal Justice Statistics (annual) — Broad-based data from 150+ sources (400+ tables, 100+ figures, subject index, annotated bibliography, addresses of sources)

Send me a signup form for the NIJ Catalog (free 6 times a year), which abstracts both private and government criminal justice publications and lists upcoming conferences and training sessions in the field.

To be added to any BJS mailing list, please fill in this page and fax to (410) 792-4358 or fold, stamp, and mail to the Bureau of Justice Statistics Clearinghouse at the address below.

You will receive an annual renewal card. If you do not return it, we must drop you from the mailing list.

To order copies of recent BJS reports, attach a list of titles and NCJ order numbers.
