National Incident-Based Reporting System Estimation Program

The National Incident-Based Reporting System (NIBRS) collects detailed information on crime incidents recorded by law enforcement agencies and reported to the FBI. NIBRS captures multiple characteristics of each crime incident—including demographic characteristics of crime victims, offenders, and persons arrested; details of the incident type and location; the types of weapons used; and relationships between victims and offenders.

The Bureau of Justice Statistics (BJS) and FBI NIBRS Estimation Program uses imputation and weighting procedures to develop national and subnational estimates of crime (i.e., NIBRS estimates) that account for nonresponse and missing data. NIBRS estimates can be analyzed at the incident, offense, victim, or arrestee level for multiple geographic areas (e.g., national, state, city size).

NIBRS National Estimates API

NIBRS National Estimates are a subset of the NIBRS estimates that are available for analysis through an API. The *NIBRS National Estimates* include nationally representative estimates at the incident-, offense-, and victim-level for crime reported by law enforcement in the year indicated in the files.

estimate	Estimate (weighted)	The weighted estimate for a particular indicator	Number
estimate_unweighted	Estimate (unweighted)	The unweighted estimate for a particular indicator	Number
estimate_geographic_location	Estimate geographic location	<p>This field indicates if the estimate is at the national level, region, state, MSA, etc. Also, it shows if subset by the various demographics for certain tables.</p> <p>Note the geographic permutations contain labels such as National, State, MSA, etc., whereas the demographic permutations contain labels such as Age: 12 or Older, Sex: Female, Race: White in addition to the geographic permutation. If the label is just the geographic permutation, then all persons within an incident was used for the estimate and for the purpose of this document is called the main geographic permutation to calculate various columns in this database.</p>	Text
estimate_type	Estimate type	This field indicates if the estimate is of the type (1) count, (2) percentage, or (3) rate.	Text
estimate_type_num	Estimate type (number)	This field contains a numeric value representing the estimate type: 1=count; 2=percentage; 3=rate.	Number
estimate_type_detail_percentage	Estimate type detail: percentage	This field indicates the type of percentage being estimated. For example, incident level or victim level. If the estimate is not a percentage, this field will be blank.	Text
estimate_type_detail_rate	Estimate type detail: rate	This field indicates the type of rate being estimated. For example, crime rate per 100,000 persons or arrest rate per 100,000 persons. If the estimate is not a rate this field will be blank.	Text

estimate_standard_error	Estimate standard error	This field contains the measure of uncertainty for an estimate.	Number

Variable Name	Description	Detail	Data Type
estimate_upper_bound	Estimate upper bound	This field represents the upper bound of the confidence interval for the estimate.
