

Bureau of Justice Statistics Bulletin

Prisoners in 1989

The number of prisoners under the jurisdiction of Federal or State correctional authorities at yearend 1989 reached a record 710,054. The States and the District of Columbia added 73,223 prisoners during the year; the Federal system, 9,243. The total increase, 82,466 inmates, also set a new record, exceeding the 1982 record increase by more than 38,000. The increase for 1989 brings total growth in the prison population since 1980 to 380,233 — an increase of about 115% in the 9-year period (table 1).

The 1989 growth rate (13.1%) was greater than the percentage increase recorded during 1988 (7.3%), and the number of new prisoners added during 1989 was nearly 40,000 higher than the number added during the preceding year (42,504). The 1989 increase translates into a nationwide need for nearly 1,600 new prison bedspaces per week.

Prisoners with sentences of more than 1 year (referred to as "sentenced prisoners") accounted for 96% of the total prison population at the end of 1989, growing by 12.7% during the year (table 2). The remaining prisoners had sentences of a year or less or were unsentenced (like those, for example, awaiting trial in States with combined prison-jail systems).

The number of sentenced Federal prisoners grew at a slightly lower rate than sentenced prisoners in the States during the year (10.4% versus 12.7%). Among the 12,003 Federal prisoners with no sentences or sentences of 1 year or less were 1,955 under the jurisdiction of the Immigration and Naturalization Service, an increase of 99 from the number held at the end of 1988 (1,856). The number of Federal prisoners with no sentences or sentences of 1 year or less increased by 4,813

May 1990

This Bulletin presents counts of the Nation's prisoners at the end of 1989. The year was marked by the largest absolute increase in the number of persons confined in State or Federal institutions recorded in the 65-year history of this statistical series. The 1989 increase of more than 82,000 prisoners approximately equals a demand for 1,600 new prison beds per week nationwide.

The Bureau of Justice Statistics expresses its appreciation to the departments of corrections in the 50 States, the District of Columbia, and the Federal prison system, who make it possible for us to gather and report data on the Nation's prisoners.

Joseph M. Bessette
Acting Director

during 1989 (from 7,190 to 12,003) while the number of sentenced prisoners increased by 4,430.

In Kansas and North Dakota, prison populations decreased during 1989. The total decrease for the 2 States was 210 inmates. Total prison population rose most rapidly during 1989 in Rhode Island (30.1%), Colorado (26.9%), South Dakota (25.2%), and Utah (21.3%). Thirty-one States reported total prisoner increases of 10% or more since yearend 1988. California's increase of more than 11,100 prisoners during the year was the largest for any single jurisdiction. At the end of 1989, California institutions confined about 1 in 8 prisoners nationwide. Colorado, for the third year in a row, experienced an annual

Table 1. Change in the State and Federal prison populations, 1980-89

Year	Number of inmates	Annual percent change	Total percent change since 1980
1980	329,821		
1981	369,930	12.2%	12.2%
1982	413,806	11.9	25.5
1983	436,855	5.6	32.5
1984	462,002	5.8	40.1
1985	502,507	8.8	52.4
1986	544,972	8.5	65.2
1987	585,084	7.4	77.4
1988	627,588	7.3	90.3
1989	710,054	13.1	115.3

Note: All counts are for December 31 of each year and may reflect revisions of previously reported numbers.

increase of more than 20% in the number of State prisoners; its yearend 1989 population of 7,318 was 92% higher than the yearend 1986 population of 3,804.

Rates of Incarceration Increase

On December 31, 1989, the number of sentenced prisoners per 100,000 residents was 274, also setting a new record. Ten of the seventeen jurisdictions with rates equal to or greater than the rate for the Nation were located in the South, four were in the West, two were in the Midwest, and one was in the Northeast.

Since 1980 the number of sentenced inmates per 100,000 residents has risen more than 97%, from 139 to 274. During this period, per capita incarceration rates have increased the most in the West (a 151% growth from 105 to 264) and in the Northeast (a 148% growth from 87 to 216).

Note: Explanatory notes for each jurisdiction are reported in the appendix. Prisoner counts for 1988 may differ from those reported in previous publications. Counts for 1989 are subject to revision as updated

figures become available.

--Not applicable.

*The number of prisoners with sentences of more than 1 year per 100,000 resident population.

**Data for 1989 include prisoners sentenced to State prison but held in local jails; 1989 data are not comparable to counts from prior years.

The per capita number of sentenced prisoners in the Midwest climbed 107% (from 109 to 226), and the rate in the South rose 54% (from 188 to 290). The number of sentenced Federal prisoners per 100,000 U.S. residents has increased 111% (from 9 to 19) over the same period.

Prison populations in Northeastern States grow the fastest

During 1989 the percentage increase in the number of sentenced prisoners was highest in the Northeastern States, with a gain of 16.6%. This marks the first time since

1984 that a region other than the West has had the largest percentage growth in the sentenced prison population. The number of sentenced prisoners grew by 14.0% in the West, 13.4% in the Midwest, and 9.9% in the Southern States. The sentenced Federal prison population grew by 10.4%. Since 1980 sentenced prison populations in Western States have increased nearly 203%, compared to growth of about 155% in the Northeast, 111% in the Midwest, and about 75% in the South (table 3). Over the same period the number of sentenced Federal prisoners rose by almost 129%. Overall, the number of sentenced prison-

ers nationwide has increased by 115% since 1980, from 315,974 to 679,263.

Since 1980, 30 States, the District of Columbia, and the Federal prison system have more than doubled the number of sentenced prisoners. Alaska, California, New Hampshire, and New Jersey have experienced a threefold increase. In 1980 these 4 States housed 29,725 sentenced prisoners or 9.4% of the Nation's sentenced prisoners; in 1989 they housed 106,851 or 15.7% of the sentenced inmates nationwide.

Georgia	20,885	Alabama	329	Idaho	17.0	Hawaii	157.4
New Jersey	19,439	Maryland	325	Kentucky	16.4	Utah	153.8

Note: The District of Columbia as a wholly urban jurisdiction is excluded.

*Prisoners with sentences of more than 1 year.

California's increase of 61,074 sentenced prisoners since 1980 accounts for 67% of the increase for the West and 18% of the increase among all States over the period. In 1980, 7.9% of the Nation's sentenced State prisoners were in California; in 1989, 13.3%. (For additional State comparisons, see table 4.)

The female prison population has grown more rapidly than the male population in each year since 1981. The higher growth rates for women over the 1981-89 period have raised the percentage of women in the Nation's prison population from 4.2% in 1981 to 5.7% in 1989 (table 6).

In 1989, 21 States, the District of Columbia, and the Federal system had more than 500 female inmates. Among these jurisdictions, 20 had increases of at least 10%, led by the District of Columbia's increase of 54.3% (from 372 in 1988 to 574 in 1989). California's increase during 1988, 1,107 inmates, accounted for 13.9% of the nationwide increase of 7,964.

Female prisoner population growth outpaces that of males

Women inmates numbered 40,556, increasing at a faster rate during 1989 (24.4%) than males (12.5%) (table 5). The rate of incarceration for sentenced males (531 per 100,000 males in the resident population), however, was about 18 times higher than for sentenced females (29 per 100,000 females in the resident population).

Table 5. Prisoners under the jurisdiction of State or Federal correctional authorities, by sex, yearend 1988 and 1989

Local jails held more than 18,000 because of State prison crowding

At the end of 1989, 20 jurisdictions reported a total of 18,236 prisoners held in local jails or other facilities because of crowding in their prisons (table 7). The number of State prisoners held locally increased by 27.0% over that of yearend 1988. Three States — Louisiana, New Jersey, and Tennessee — accounted for more than half of the prisoners sentenced to prison but incarcerated locally. Because of crowding in State facilities, five States — Kentucky, Louisiana, Mississippi, New Jersey, and Tennessee — held in local jails more than 10% of the prisoners sentenced to State prison. Overall, 2.6% of the State prison population was confined in local jails on December 31, 1989, because of prison crowding.

^aFor States not including jail backups in their jurisdiction counts, the percentage of jurisdiction population was calculated on the total number of State inmates in jail and prison.

^bStates that did not count jail backups in their 1988 jurisdiction count but did include these prisoners in

their 1989 jurisdiction count.

^cIncludes inmates housed in other States as a result of prison crowding.

^dInmates sentenced to State prison but held in local lockups.

Prison capacity estimates are difficult to compare

The extent of crowding in the Nation's prisons is difficult to determine precisely because of the absence of uniform measures for defining capacity. A wide variety of capacity measures is in use among the 52 reporting jurisdictions because capacity may reflect both available space to house inmates and the ability to staff and operate an institution. To estimate the capacity of the Nation's prisons, jurisdictions were asked to supply up to three measures for yearend 1989 — rated, operational, and design capacities. These measures were defined as follows:

• **Rated capacity** is the number of beds or inmates assigned by a rating official to institutions within the jurisdiction.

• **Operational capacity** is the number of inmates that can be accommodated based on a facility's staff, existing programs, and services.

• **Design capacity** is the number of inmates that planners or architects intended for the facility.

Of the 52 reporting jurisdictions, 39 supplied rated capacities, 43 provided operational capacities, and 37 submitted design capacities (table 8). As a result, estimates of total capacity and measures of the relationship to population are based on the highest and lowest capacity figures provided. (Twenty-two jurisdictions reported one capacity measure or gave the same figure for each capacity measure they reported.)

Table 8. Reported Federal and State prison capacities, yearend 1989

Jurisdiction	Rated capacity	Operational capacity	Design capacity	Population* as a percent of:	
				Highest capacity	Lowest capacity

... Data not available.

*Excludes inmates who had been sentenced to State prison but were held in local jails because of crowding

and who were included in the total prisoner count.

**Excludes prisoners housed in contract or other non-Federal facilities.

Most jurisdictions are operating above reported capacity

Prisons generally require reserve capacity to operate efficiently. Prison dormitories and cells need to be maintained and repaired periodically, special housing is needed for protective custody and disciplinary cases, and space may be needed to cope with emergencies. At the end of 1989, 10 States reported that they were operating below 95% of their highest capacity. Forty-five jurisdictions and the Federal prison system reported operating at 100% or more of their lowest capacity; 39 of these held populations that met or exceeded their highest reported capacities.

Overall at the end of 1989, State prisons were estimated to be operating at 107% of their highest capacities and 127% of their lowest capacities (table 9). Prisons in Southern States were found to be operating closest to their reported capacities on each measure. The Federal system was estimated to be operating at 63% over capacity.¹

Between 1988 and 1989, State and Federal prison capacities were estimated to have increased by approximately 40,000-60,000 beds (based on the highest and lowest capacities reported in table 8). At the end of 1989, prisons nationwide were estimated to be 10%-29% over their capacities (table 10) based on the following:

	Reported population*	Highest capacity	Lowest capacity
U.S. total	685,083	621,144	531,616
Federal	52,984	32,494	32,494
State	632,099	588,650	499,122

*Reported population excludes prisoners housed in local jails and other facilities where they have been included in the jurisdiction count and female prisoners in four States for which capacity data for women's facilities were not reported. Federal figures exclude populations held in contracted community-based facilities.

¹The Federal prison system in 1989 abandoned the operational capacity measure reported in prior years. They also utilize a designated capacity for management purposes that establishes an average capacity for facilities within security levels. For 1989, they reported the designated capacity to be 53,958 for Federal institutions. This capacity measure is not equivalent to the three measures gathered from the States.

Table 9. State prison population and capacity, by region, 1989

	Prison population	Highest capacity	Lowest capacity	Population as a percent of:	
				Highest capacity	Lowest capacity
Total	632,099	588,650	499,122	107%	127%
Northeast	111,628	96,926	84,481	115	132
Midwest	136,200	112,424	106,787	121	128
South	243,210	246,732	215,120	99	113
West	141,061	132,568	92,724	108	152

Note: Population counts exclude prisoners sentenced to State prison but held in local jails and

female offenders in 4 States for which the capacity of women's facilities was not reported.

Prison population growth may reflect increasing certainty of punishment

There is some evidence that during the period from 1980 to 1988 changes in criminal justice policies have increased from earlier levels a criminal's probability of being incarcerated. Murder, nonnegligent manslaughter, rape, robbery, aggravated assault, and burglary are among the most serious crimes and account for approximately half of prison commitments from courts. In 1960 there were 62 prison commitments for every 1,000 of these crimes reported to law enforcement agencies (table 11).

During the rest of the decade this ratio steadily declined, reaching 23 in 1970, and was relatively stable during the 1970's. Between 1980 and 1988 the ratio increased 104%, from 25 commitments per 1,000 reported crimes to 51.

Table 11. Court commitments to State prisons, relative to offenses and arrests, 1960-88

Year	Commitments to prison per 1,000:	
	Selected serious offenses	Adult arrests for same offenses
1960	62	299
1965	45	261
1970	23	170
1975	26	185
1980	25	196
1981	29	214
1982	35	219
1983	39	247
1984	39	246
1985	42	266
1986	43	268
1987	48	301
1988	51	291

Note: Selected offenses include murder, nonnegligent manslaughter, forcible rape, robbery, aggravated assault, and burglary. Data for crimes reported to the police and adult arrests are from the Federal Bureau of Investigation, *Crime in the U.S., 1978-88* (Washington, D.C.: U.S. Government Printing Office). Commitments to prison are inmates admitted from sentencing courts. The data on which this table is based are presented in the appendix table.

Table 10. Population as a percent of reported capacity for State and Federal prisons, 1987-89

	U.S. total	Federal prisons	State prisons
Population as a percent of capacity*			
Highest			
1987	107%	137%	105%
1988	109	133	107
1989	110	163	107
Lowest			
1987	124%	173%	120%
1988	125	172	123
1989	129	163	127
Net change in capacity, 1987-88			
Highest	62,603	3,382	59,221
Lowest	40,020	3,382	36,638

Note: States were asked to report their rated, operational, and design capacities. Tabulations reflect the highest and lowest of the 3 capacities reported for 1987, 1988, and 1989.

*Excludes inmates who had been sentenced to State prison but were held in local jails because of crowding and who were included in the total prisoner count.

Similarly, between 1960 and 1970 the ratio of prison commitments to adult arrests for the selected crimes declined from 299 per 1,000 to 170. This ratio was relatively stable during the rest of the 1970's, but it increased by 48% between 1980 and 1988, from 196 commitments per 1,000 adult arrests to 291. (See *Methodological note* for more detail on these data.)

Admissions-to-crime ratios for individual States provide an alternative measure of prison use to population-based rates (table 12). Population-based incarceration rates take into account the number of sentenced prisoners and the size of the resident population in a jurisdiction. The crime-based rate measures entry into prison relative to the magnitude of the crime problem during a year.

Table 12. State prison admissions, relative to selected serious offenses and the adult population, by State, 1980 and 1988

Region and State	Admissions per 1,000 selected serious offenses		Admissions per 100,000 adults	
	1980	1988	1980	1988

Oregon	27	42	83	128
Utah	15	30	39	55
Washington	14	26	46	80
Wyoming	38	67	71	91

Note: Prison admissions refer to the number of prisoners received from courts with sentences of more than 1 year. Selected offenses are murder, nonnegligent manslaughter, forcible rape, robbery, aggravated assault, and burglary. Adults are the resident population age 18 or older.

*The number of reported crimes in 1988 was estimated by the FBI.

Sources: National Prisoner Statistics, Uniform Crime Reports, and Bureau of the Census estimates of population.

Between 1980 and 1988 the ratio of court commitments to prison and reported crimes increased 104%, from 25 commitments per 1,000 crimes to 51 (table 13). Over the same period the number of prison commitments per 100,000 adult residents increased 80%, from 80 to 144. The Northeast had the largest percentage increase in the number of commitments relative to reported crime while the West experienced the largest gain in prison commitments relative to population. However, in both 1980 and 1988 the South had the largest number of court commitments to prison relative to reported crime and to population.

Besides the increased use of prison relative to reported crime, arrests, and resident population, prison population has also been affected by changes in the extent of the illegal drug problem. An estimated two-thirds of those in State prisons for a drug offense were convicted of trafficking or manufacturing illegal drugs.² Since 1980 the number of adult arrests for drug violations has increased by 123%, and the number of arrests for sale or manufacturing of illegal drugs has grown by 180% (table 14).

²For additional information on drug offenders in State prisons, see *Profile of State prison inmates, 1986*, BJS Special Report, NCJ-109926, January 1988, and *Drug use and crime*, BJS Special Report, NCJ-111940, July 1988.

Table 13. Percent change in State prison admissions, relative to selected serious offenses and the adult population, by region, 1980 and 1988

Region	Admissions per 100,000 selected serious offenses			Admissions per 100,000 adults		
	1980	1988	Percent change, 1980-88	1980	1988	Percent change, 1980-88
U.S. total	25	51	104%	80	144	80%

Source: Estimates derived from *Crime in the U.S., 1980-88*.

Methodological note

This Bulletin is based on an advance count of prisoners conducted immediately after a calendar year ends. A detailed final count will be published later.

The data used to compute the rates in table 11 are presented in the appendix table.

Explanatory notes

Alabama. Capacity in community programs is not included in the reported capacity figures.

Alaska. In this State, prisons and jails form one integrated system. All National Prisoner Statistics (NPS) data include, therefore, both jail and prison populations.

Arizona. Population counts are based on custody data. Population counts exclude 110 male inmates and 7 female inmates housed in local jails because of crowding.

Arkansas. Beginning with the December 31, 1989, count, Arkansas separated inmates by length of sentence and included backups in local jails in the jurisdiction count. These revisions will affect comparisons to prior years' data.

California. Population counts are based on custody data.

Colorado. Population counts for "inmates with a maximum sentence over 1 year" include an undetermined number of "inmates with a sentence of 1 year or less." The sex of 43 inmates in intensive supervision programs was not reported, but these inmates are included in the male population counts.

Connecticut. In this State, prisons and jails form one integrated system. All NPS data include, therefore, both jail and prison populations.

Delaware. In this State, prisons and jails form one integrated system. All NPS data include, therefore, both jail and prison populations. Breakdowns by sentence length are estimates.

District of Columbia. Population counts exclude those inmates housed in Federal Bureau of Prisons facilities. Population counts exclude 821 male inmates housed in other States as a result of crowding.

Appendix table. Data used to compute the rates in table 11

Year	Number of court commitments to prison for any offense	Number of selected serious offenses reported to the police	Estimated number of adult arrests for same offenses
1960	74,852	1,200,560	250,466
1965	74,724	1,669,890	286,685
1970	67,304	2,943,820	395,678
1975	112,803	4,278,380	608,764
1980	130,323	5,139,720	666,063
1981	149,186	5,141,520	697,409
1982	164,648	4,769,490	752,873
1983	173,289	4,387,990	702,662
1984	166,927	4,257,680	677,275
1985	183,131	4,400,740	688,864
1986	203,315	4,729,540	757,797
1987	225,627	4,720,183	749,650
1988	245,310	4,784,298	841,802

Note: The number of court commitments to prison is based on the total number of entries from sentencing courts with sentences greater than 1 year. The number of reported offenses is derived from annual publications from the FBI on the number of murders, nonnegligent manslaughters, rapes, robberies, aggravated assaults, and burglaries reported to police agencies. The estimated number of adult arrests for these crimes is derived by multiplying the estimated total number of arrests by the percentage of known arrests age 18 or older, as reported annually by the FBI. For 1960 and 1965, estimates of adult arrests were based on FBI data for total known arrests for those years and

were weighted for reporting coverage (see *Crime in the U.S., 1970*, tables 24 and 25). By year, the percentage of adult arrests among all arrests for these crimes was:

1960 - 65.7%	1983 - 72.1%
1965 - 61.4%	1984 - 73.0%
1970 - 61.5%	1985 - 73.2%
1975 - 60.8%	1986 - 75.4%
1980 - 67.4%	1987 - 75.7%
1981 - 69.1%	1988 - 77.3%
1982 - 71.5%	

Federal. Population counts for "unsentenced inmates" include 1,939 males and 16 females who come under the jurisdiction of the U.S. Immigration and Naturalization Service. Capacity figures apply to Bureau of Prisons institutions only and do not include capacity provided by contract facilities.

Florida. Population counts are based on custody data.

Georgia. Population counts are based on custody data. In accordance with the policy of Georgia's Department of Corrections (DOC), inmates housed in local jails awaiting pickup are not included in the jurisdiction population until they enter a State prison.

Hawaii. In this State, prisons and jails form one integrated system. All NPS data include, therefore, both jail and prison populations.

Idaho. Beginning with the December 31, 1989, count, population counts include inmates housed in local jails because of crowding. This revision will affect comparisons to prior years' data.

Indiana. Population counts are based on custody data and exclude inmates housed in local jails because of crowding.

Iowa. Population counts are based on custody data.

Kansas. Female capacities are included in the male capacities reported.

Kentucky. The counts reported for the number of persons in local jails because of crowding exclude an undetermined number of inmates held in out-of-State jails because of crowding.

Maine. Population counts are as of January 1, 1990. Female capacities are in the male capacity figures reported.

Maryland. While population totals are actual manual counts, the breakdowns for sentence length are estimates based on the actual sentence length breakdowns of Maryland's automated data system.

Massachusetts. Population counts are based on custody data as of December 29, 1989. Population counts exclude 86 unsentenced females in DOC facilities under county jurisdiction and 365 male and 12 female inmates housed in local jails because

of crowding. Population counts for "inmates with a maximum sentence over 1 year" include an undetermined number of inmates with a sentence of 1 year or less." Population totals are actual counts; however, the male/female breakdown is an estimate believed to be within 0.1% of the actual counts. By law, offenders in Massachusetts may be sentenced to terms of up to 2 1/2 years in locally operated jails and correctional institutions. Such populations are excluded from the State count but are included in published population counts and rates for local jails and correctional institutions.

Michigan. Population counts are based on custody data. Capacity figures exclude the capacities of the Community Residential Program.

Nevada. Reported capacity figures exclude space for women at Nevada's Restitution Centers.

New Hampshire. Beginning December 31, 1989, New Hampshire will report female capacity because of the opening of a women's facility in November 1989.

New Jersey. Rated, operational, and design capacities include 512 bedspaces in county facilities.

North Carolina. While population totals are actual counts, the breakdowns for sentence length are estimates believed to be accurate within 1% of the actual counts.

Ohio. Population counts for "inmates with a maximum sentence over 1 year" include an undetermined number of "inmates with a sentence of 1 year or less."

Oklahoma. Population counts for "inmates with a maximum sentence over 1 year" may include a small, undetermined number of inmates with a sentence of 1 year.

Oregon. Population counts are as of January 1, 1990. Operational capacity excludes 127 beds rented from the State of Washington. Oregon's counts for jail backups include 74 men, 40 of whom are in Texas, and 53 women, 24 of whom are in local work release centers.

Rhode Island. In this State, prisons and jails form one integrated system. All NPS data include, therefore, both jail and prison populations.

Tennessee. Beginning December 31, 1989, population counts by sentence length are included, and the jurisdiction count includes inmates housed in local jails because of crowding.

Texas. Population counts are based on custody data.

Vermont. Population counts are as of December 14, 1989. In this State, prisons and jails form an almost completely integrated system. However, some county and municipal authorities do operate local lockups. NPS data include both jail and prison populations. The counts for jail crowding include 34 male inmates housed in local lockups.

Washington. Capacity figures exclude space in State work release facilities that housed 552 male and 38 female inmates on December 31, 1989.

West Virginia. The female population counts are based on custody data. The male jurisdiction count excludes an undetermined number of inmates housed in local jails awaiting pickup.

Wyoming. The operational capacity figure is the absolute total bedspace available to Wyoming's Department of Corrections, and it includes 60 bedspaces in community centers.

Bureau of Justice Statistics Bulletins are prepared principally by BJS staff. This Bulletin was written by Lawrence A. Greenfeld, corrections unit chief, and was edited by Thomas Hester. Statistical assistance was provided by Lallis Cotton. Marilyn Marbrook, publications unit chief, administered production, assisted by Betty Sherman, Yvonne Boston, and Jayne Pugh. Collection and processing of these data were conducted under the general supervision of Lawrence A. McGinn and Gertrude Odom of the U.S. Bureau of the Census, assisted by Carol Spivey.

May 1990, NCJ-122716

The Assistant Attorney General, Office of Justice Programs, coordinates the activities of the following program offices and bureaus: Bureau of Justice Statistics, National Institute of Justice, Bureau of Justice Assistance, Office of Juvenile Justice and Delinquency Prevention, and Office for Victims of Crime.

Please put me on the mailing list for—

- Law enforcement reports**—national data on State and local police and sheriffs' departments: operations, equipment, personnel, salaries, spending, policies, programs
- Federal statistics**—data describing Federal case processing, from investigation through prosecution, adjudication, and corrections
- Drugs and crime data**—sentencing and time served by drug offenders, drug use at time of crime by jail inmates and State prisoners, and other quality data on drugs, crime, and law enforcement
- Justice expenditure and employment reports**—annual spending and staffing by Federal/State/local governments and by function (police, courts, etc.)

- White-collar crime**—data on the processing of Federal white-collar crime cases
- Privacy and security of criminal history information and information policy**—new legislation; maintaining and releasing intelligence and investigative records; data quality issues
- Juvenile corrections reports**—juveniles in custody in public and private detention and correctional facilities
- BJS bulletins and special reports**—timely reports of the most current justice data
- Prosecution and adjudication in State courts**—case processing from prosecution through court disposition, State felony laws, felony sentencing, criminal defense

- Corrections reports**—results of sample surveys and censuses of jails, prisons, parole, probation, and other corrections data
- National Crime Survey reports**—the only regular national survey of crime victims
- Sourcebook of Criminal Justice Statistics** (annual)—broad-based data from 150+ sources (400+ tables, 100+ figures, subject index, annotated bibliography, addresses of sources)
- Send me a form to sign up for **NCJ Reports** (free 6 times a year), which abstracts both private and government criminal justice publications and lists upcoming conferences and training sessions in the field.

To be added to any BJS mailing list, copy or cut out this page, fill it in and mail it to:

- If your mailing label below is correct, check here and do not fill in your name and address.
