

NATIONAL INCIDENT-BASED REPORTING SYSTEM

Sexual Assaults Recorded by Law Enforcement, 2015

This report presents statistics on [sexual assault victimizations](#) that were reported to NIBRS in 2015 by law enforcement agencies in 15 states. The National Incident-Based Reporting System (NIBRS) captures detailed information on four types of violent sexual assaults recorded by law enforcement: rape , sodomy , sexual assault with an object , and fondling . This report contains interactive charts that compare the demographic characteristics of sexual assaults to victims of other serious violent crimes, estimates of sexual victimization rates by victim demographic characteristics, and statistics on police clearance and arrest outcomes for sexual assaults. Data for this report were submitted by state and local law enforcement agencies from 15 states certified by the FBI to report all of their 2015 crime data to NIBRS. Those [15 NIBRS-certified states](#) are highlighted in the map below.

In 2015 in West Virginia—

- **18%** of all violent victimizations involved a sexual assault; the percentage was higher for females (**16%**) than for males (**4%**).
- There were **59.3 sexual assault victimizations per 100,000** persons; the rate was **8 times** higher for juveniles (**185.2**) than for adults (**24.6**).
- The average age of sexual assault victims was **14 years** for males and **18 years** for females.
- **95%** of sexual assault victimizations were committed by someone the victim knew.

Contents:

► Part 1: Violent Victimization That Involved a Sexual Assault

- Violent victimizations that involved a sexual assault
- Violent victimizations that involved a sexual assault, by victim sex
- Violent victimizations that involved a sexual assault, by victim age

► Part 2: Characteristics of Sexual Assault Victims and Incidents

- Sexual assault victimizations, by offense type
- Sexual assault victimizations, by offense type and victim age
- Sexual assault victimizations, by victim-offender relationship
- Sexual assault victimizations, by victim age
- Sexual assault victimizations, by offender sex
- Sexual assault victimizations, by victim age and offender sex
- Sexual assault victimizations, by weapon type
- Sexual assault victimizations, by offense type and weapon type
- Sexual assault victimizations, by victim-offender relationship and weapon type
- Sexual assault victimizations, by incident time of day
- Sexual assault victimizations, by location type and incident time of day

► Part 3: Rates of Sexual Assault Victimization, by Victim Demographics

- Rates of sexual assault victimization, by victim sex
- Rates of sexual assault victimization, by victim race
- Rates of sexual assault victimization, by victim sex and victim race
- Rates of sexual assault victimization, by victim age

► Part 4: Clearance and Arrest

- Violent crime incidents that were cleared by arrest, cleared by exceptional means, or not cleared, by offense type
- Sexual assault incidents that were cleared by arrest, cleared by exceptional means, or not cleared, by victim age

PART 1

Violent Victimitizations That Involved a Sexual Assault

Nearly one-fifth of all violent victimizations recorded by law enforcement in West Virginia involved a sexual assault offense of rape, sexual assault with an object, sodomy, or fondling.

Violent victimizations that involved a sexual assault, West Virginia, 2015

Bureau of Justice Statistics, based on data from the Federal Bureau of Investigation, National Incident-Based Reporting System, 2015.

[Download chart data](#)

Most sexual assaults—81%—were against a female victim, while males were the majority—55%—of victims of non-sexual violent crimes, such as robbery, aggravated assault, kidnapping, and homicide.

In 2015, sexual assaults against females made up a sizeable portion—about 15%—of all violent victimizations recorded by West Virginia law enforcement agencies.

[Download chart data](#)

On average, sexual assault victims were younger than victims of non-sexual violence. The majority—66%—of sexual assaults in West Virginia were against juvenile victims age 17 or younger, while juveniles accounted for a considerably smaller portion—16%—of non-sexual violent victimizations.

Sexual assaults against juveniles made up 13% of all violent crimes handled by West Virginia law enforcement in 2015.

Note: Excludes 421 violent victimizations for which victim age is unknown. See [Methodology](#) for description of [sexual assault victimizations](#), [non-sexual violent crime victimizations](#), and [adult and juvenile age categories](#).
Bureau of Justice Statistics, based on data from the Federal Bureau of Investigation, National Incident-Based Reporting System, 2015.

[Download chart data](#)

Nearly three-fifths of the violent crimes experienced by victims ages 5 to 13 involved a sexual assault, making the victims in this age group the most likely to experience violence of a sexual nature.

Violent victimizations against youth age 17 or younger were more likely to involve a sexual assault than violent victimizations against victims age 18 or older. About 51% of violent crime victims ages 14 to 17 experienced a sexual assault, compared to 17% of victims ages 18 to 24.

[Download chart data](#)

Violent crimes against young females were more likely to involve a violent sexual assault than those committed against young males. About 68% of violent crimes against females ages 5 to 13 involved a sexual assault, compared to 40% for males in the same age group.

Violent victimizations of females that involved a sexual assault, by victim age, West Virginia, 2015

Note: Excludes 69 violent victimizations of females for which victim age is unknown. See [Methodology](#) for description of [sexual assault victimizations](#) and [non-sexual violent crime victimizations](#).
Bureau of Justice Statistics, based on data from the Federal Bureau of Investigation, National Incident-Based Reporting System, 2015.

Violent victimizations of males that involved a sexual assault, by victim age, West Virginia, 2015

Note: Excludes 164 violent victimizations of males for which victim age is unknown. See [Methodology](#) for description of [sexual assault victimizations](#) and [non-sexual violent crime victimizations](#).
Bureau of Justice Statistics, based on data from the Federal Bureau of Investigation, National Incident-Based Reporting System, 2015.

PART 2

Characteristics of Sexual Assault Victims and Incidents

Sexual victimization and abuse can take on various forms. NIBRS captures information on four unique [sexual assault offense types](#): rape, sodomy, sexual assault with an object, and fondling. Rape, sexual assault with an object, and sodomy offenses form the basis of the official [UCR definition of rape](#) in the United States. NIBRS provides detailed information about the context of sexual assault victimizations, such as the demographic characteristics of victims and offenders, the type of location and time of day during which these victimizations occur, the relationship of the victim to the offender, and the type of weapon or force used by the offender.

SEXUAL ASSAULT OFFENSE TYPES

The majority of sexual assault victimizations recorded by West Virginia law enforcement in 2015 consisted of rape (31%) and fondling (46%).

Sexual assault victimizations, by offense type, West Virginia, 2015

[Download chart data](#)

The age groups with the highest proportion of rapes recorded by law enforcement were victims ages 14 to 17 (29%) and ages 18 to 24 (24%). Approximately 30% of sodomy and 48% of fondling victimizations were committed against victims in one age group—children ages 5 to 13. Cases of fondling against children in this age group accounted for over one-fifth (22%) of all sexual assaults recorded in 2015.

[Download chart data](#)

SEXUAL ASSAULT VICTIMS AND OFFENDERS

Most sexual assaults recorded by law enforcement were committed by someone the victim knew, typically a friend or acquaintance (59%) or a non-intimate family member (27%).

A small fraction—5%—of sexual assaults were committed by a stranger.

Sexual assault victimizations, by victim-offender relationship, West Virginia, 2015

Bureau of Justice Statistics, based on data from the Federal Bureau of Investigation, National Incident-Based Reporting System, 2015.

[Download chart data](#)

The majority of sexual assaults were committed against victims ages 5 to 17. Victimization against children ages 5 to 13 accounted for one-third of all sexual assaults recorded by law enforcement, and those against children ages 14 to 17 accounted for over one-fifth.

Sexual assaults against children were far less likely to be committed by a stranger than those against victims age 18 or older.

Family members committed over three-fifths (62%) of all sexual assaults against young children under age 5 and over two-fifths (43%) of those against children ages 5 to 13. Most sexual assaults against victims age 14 or older were committed by friends and acquaintances.

[Download chart data](#)

TYPE OF WEAPON AND FORCE USED

Nearly three-fifths—55%—of all sexual assaults were committed using personal weapons, such as the offender’s hands, fists, feet, arms, teeth, etc. while over one-third (37%) involved no weapon or force.

Firearms were rarely used to commit sexual assaults. In West Virginia in 2015, 0.1% of all sexual assaults were committed with a firearm.

Sexual assault victimizations, by weapon type, West Virginia, 2015

[Download chart data](#)

TIME OF DAY AND LOCATION OF SEXUAL ASSAULTS

Sexual assault victimizations recorded by law enforcement peaked at 8 a.m.

However, the time of day at which sexual assaults occurred was strongly correlated with victim age. A juvenile was the victim in most sexual assaults that occurred between the daytime hours of 8:00 am and 6:00 pm. Persons age 18 or older were the most common victims of sexual assaults that occurred in the late evening and early morning hours between 11:00 pm and 6:00 am.

[Download chart data](#)

PART 3
Rates of Sexual Assault Victimization, by Victim Demographics

Information on victim characteristics in NIBRS was combined with [U.S. Census population estimates](#) to calculate victimization rates for select demographic groups. The charts below display the overall sexual assault victimization rate for the state and rates for persons grouped by sex, race, and age. When expressed as a rate per 100,000 residents, NIBRS victimization data provides one indicator of the extent to which some demographic groups are at greater risk of sexual assault victimization relative to their share of the state population.

In 2015, there were 59.3 sexual assault victimizations per 100,000 West Virginia residents. The rate was 4 times higher for females (95.2) than for males (22.2).

Rates of sexual assault victimization, by victim sex, West Virginia, 2015

[Download chart data](#)

Teens ages 14 to 17 experienced the highest rate of sexual assault victimization, compared to other age groups. In 2015, police recorded an estimated 237 sexual assaults against persons ages 14 to 17 (270.1 per 100,000), a rate 5 times higher than the overall rate (59.3) for West Virginia.

The rate of sexual assault victimization for females ages 14 to 17 (501.5 per 100,000) was 10 times higher than the rate for boys in this same age group (49.0 per 100,000) and 8 times higher than the overall rate for West Virginia (59.3).

[Download chart data](#)

PART 4

Clearance and Arrest

NIBRS is the only source of incident-based crime data that also provides information about whether sexual assault incidents are cleared and whether law enforcement agencies make an arrest. NIBRS also allows users to examine whether police [clearance](#) and arrest outcomes vary according to attributes of the [incident](#), such as the type of sexual assault(s) committed, whether the victim and offender were strangers, whether a weapon was used, and the time of day and location of the incident.

The result is a detailed picture of law enforcement handling of sexual assault incidents that come to their attention. For each sexual assault recorded by law enforcement, NIBRS captures information on whether the incident was cleared and whether the incident was cleared by arrest or by [exceptional means](#). Sexual assault incidents that are cleared by exceptional means are considered solved for administrative purposes but do not result in an arrest or in the prosecution of the offender(s).

At least 43% of murder/non-negligent manslaughter, aggravated assault, or kidnapping incidents resulted in an arrest. For sexual assault incidents, 15% resulted in an arrest.

[Under certain circumstances](#), law enforcement agencies may clear an incident by exceptional means rather than arrest. While the incident is still considered cleared, the clearance does not result in the arrest or conviction of an offender. In West Virginia, the exceptional clearance rate for sexual assaults was 17%, compared to 1% for robberies, 4% for aggravated assaults, and 7% for kidnappings.

Violent crime incidents that were cleared by arrest, cleared by exceptional means, or not cleared, by offense type, West Virginia, 2015
